CONTENTS

VOLUME I, 1993

PLENARY SESSION PAPERS

Offshore Production Systems for Ultra-Deep Water in the Gulf of Mexico Part II: Vessel Systems
Hin Chiu .......................................................................................................................... 1

Outline of R&D of the Superconducting MHD Ship "YAMATO-1"
Yohei Sasakiwa, Setsuo Takezawa and Kazumi Sugawara........................................... 12

Research and Development of Techno-Superliner
Hisayoshi Endo and Kazuo Sugai...................................................................................... 20

U.S. SUPERCONDUCTING MHD PROPULSION

Electromagnetic Marine Propulsion: Recent Advances and Future Challenges
Gabriel D. Roy .................................................................................................................. 24

Technology Challenges and Optimization of Superconducting Electromagnetic Thrusters for Small Undersea Vehicle Applications
J.S.C. Meng, P.J. Hendricks, J.D. Hrubes and C.W. Henoch ........................................... 31

Liquid-Metal Sliding Electrical Contacts for Homopolar Motors and Generators
Nancy Ma, John S. Walker, Gita Talmage, Samuel H. Brown and Neal A. Sondergaard.......... 39

Analytical and Experimental Studies of the Cyclic Magnetohydrodynamic Thruster Designs

LARGE LNG CARRIERS & DOUBLE HULL TANKERS
Design and Construction of a Double Hull VLCC
K. Iwai, K. Kondo, Y. Sezaki and M. Sasaki .................................................. 54

Strength of Double Hull Ship Cellular Components Under Axial and Lateral Loads
Alan Ah-Kum Pang, James M. Ricles, Le-Wu Lu, Robert J. Dexter and Jeffrey E. Beach ............... 62

Dynamic Load Approach for Double Hull Tanker
S. Kawachi, K. Shigematsu and T. Kushima .................................................... 70

Fatigue Analysis for 300K Double Hull VLCC
Hyon-Soo Bong, Man-Soo Kim, Sung-Kon Han and Kyung-Seok Lee ........................................ 78

Fatigue of Welded High-Strength Steel Ship Structures
R.J. Dexter, J.W. Fisher, J.E. Beach ................................................................. 86

Study on Impact Pressure Due to Sloshing in Mid-Sized LNG Carrier
Satoshi Yamamoto, Satoru Shioda, Yasuhiro Ashtani and Fukuhiro Kataoka ............................... 92

Large LNG Carrier
Isao Kawabe, Masashi Kawamura, Eiji Aoki and Mitutoshi Tabata ......................................... 99

A Breakthrough for Future LNG Carriers: The Trend of Size Enlargement
Naoyuki Itoyama, Susumu Kahara, Kazuaki Yuasa and Yoshihiro Suetake .............................. 108

OCEAN RESOURCES AND ENERGY

Transfer of Offshore Technology from the Arctic to the Antarctic
John Yates, Paul Cunningham ................................................................. 116

Development of a Mouse Hole Shock Absorber for Offshore Drilling Operations
Dennis B. Friesen and Chia Meng Teck ....................................................... 127

Development of Mid-Layer Floating Type Marine Cultivation Facility
Mineo Okamoto, Osamu Nagahama, Gentaro Kai and Naoyuki Takatsu .................................... 132

Geotechnical Comparison Between Deep-Sea and Seamount Sediments
Tetsuo Yamazaki, Katsuya Tsurusaki, Keiji Handa and Yasuo Tomishima ................................ 137

Vibration-Control of a Pipe String for Mining Manganese Nodules by the Shape of Buffer
K. Aso, K. Kan, H. Doki, T. Ohkoshi and T. Natori ........................................... 143

Deep Sea Aggregate Mining Technology in Japan
Yoshio Narumi and Atsumi Sekine ................................................................... 149

Offshore Dredging Problems in Indonesia and its Environmental Issues
Partanto Prodjosumarto ........................................................................... 154
WAVE ENERGY

**Impulse Turbine with Self-Pitch-Controlled Tandem Guide Vanes for Wave Power Conversion**
T. Setoguchi, K. Kaneko, H. Maeda, T.W. Kim and M. Inoue ................................................................. 161

**The Prediction of Performance of Biplane Wells Turbine**
S. Raghunathan .............................................................................................................................................. 167

**On the Study of the Performance of OWC Due to Nonuniform Chamber Pressure**
I.H. Cho and S.W. Hong ................................................................................................................................ 176

**On-Line Phase Control for OWC Devices in Irregular Seas**
J.N.B.A. Perdigao and A.J.N.A. Sarmento ....................................................................................................... 182

**Motion and Performance of Floating Double-Acting Wave-Energy Pump**
K. Kawagusty and H. Ueki .................................................................................................................................. 190

**Shoreline Wave Power, Electrical Generation on Islay**
S.J. McIlwaine and T.J.T. Whittaker .................................................................................................................. 198

ENVIRONMENTAL PROTECTION

**The Stability of Permafrost and Gas Hydrates Subject to Global Warming**
Peter Englezos and Savvas G. Hatzikiakos ........................................................................................................ 203

**Basic Study of Ultraviolet Reflection on Coastal Sand**
Toshimasa Kawanishi, Hironobu Kadomatsu, Kimiyo Sato and Naohiko Watanabe .......................................... 211

**Oil Spill and the Environmental Damage from Blownout Oil/Gas Wells: An Integrated Approach**
R. Das, R. Rai and R.K. Mukerjie ......................................................................................................................... 216

**Laboratory Experiments of Oil Spreading in Brash Ice**
Mohamed Sayed and Sveinung Løset ................................................................................................................... 224

**A Numerical Model for the Movement of Oil Slick at Ocean**
Dong Y. Lee and Hang S. Choi ............................................................................................................................ 232

**Laws of Turbulent Diffusion and Their Engineering Application Near Chinese Coastal Waters**
Beibei Ling, Yufang Zhao and Yong Yong Ling .................................................................................................... 238

OFFSHORE STRUCTURES, JACK-UPS AND JACKETS

**Application of Jack-Up Site Specific Assessment in Sarawak Shell Berhad/Sabah Shell Petroleum**
Munawar Mohd Amin ............................................................................................................................................ 242
Stress Concentrations in Leg Nodes of a Jack-Up Rig
M. Baerheim and L. Collberg ................................................................. 249

The Seismic Response Analysis for an Artificial Island Using a Pseudo-Static Method
Bao-rong Cheng, Zhao-chang Zheng and Jian Su ..................................... 258

Two Dimensional Analysis of a Tethered Subsea Unit During the Launch and Recovery Process
S. Huang and D. Vassalos ........................................................................ 263

Some Considerations on the Structural Jacket Transportation Analysis Considering
the Barge Flexibility
Gerson Salles Veriangeri and Agustin J. Ferrante .................................... 268

Safety Assessment of Offshore Jackets in Both Undamaged and Damaged Conditions
Jeom K. Paik and Hwa K. Lim .................................................................. 279

Installation of a 479 Feet Water Depth Platform in South China Sea
Ming-Tuck Sam and Lap-Yuen Cheung ...................................................... 288

TLP's AND COMPLIANT STRUCTURES

Review of Hydrodynamic Challenges in TLP Design
B.J. Natvig and P. Teigen ......................................................................... 294

On-Site Experiment for Upending Procedure of Pre-Fabricated Tendon of TLP
M. Morikawa, Kuniteru Ishikawa, Hideyuki Suzuki and Koichiro Yoshida .............. 303

Snorre TLP Tow and Installation, Summary of Preparation, Offshore Work and Experience
Jan Muren, Arild K. Sandvik and Sigmund Lunde ......................................... 310

Earthquake Response of the Tension Leg Platform Under Unbalanced Initial Tension
Toshimasa Kawanishi, Shinobu Ohashi, Hiroaki Takamura and Hiroshi Kobayashi ...... 319

Simplified Modeling for the Nonlinear Response of Tension Leg Platforms in Deep Water
C.P. Johnson, B.B. Mekha and J.M. Roesset ............................................... 326

Double-Frequency Wave Loads on a Compliant TLP
Y.H. Liu, M.H. Kim and C.H. Kim ............................................................ 334

Dynamics of Tension-Leg-Platforms Under Current and Earthquake Forces
K. Venkataramana, Shozo Toyoda and Kenji Kawano .................................. 341

Suitability of Anchor Systems for TLP Foundations in Soft Soils
Manoj Datta and E. Shakeri ...................................................................... 345

Design of Semi-Submersible Tender Assisted Drilling and Workover Systems for
Harsh Weather Applications
J. Chaudhuri ........................................................................................................................................... 352

Application of the Turret Moored Platform (TMP) to Floating Production Developments in South East Asia
D T Brown, J A Witz and M Slater ........................................................................................................... 361

Wave-Induced Low Frequency Motions of Compliant Offshore Structures with Nonlinear Moorings
Shin-ichi Aoki, Toru Sawaragi and Michael Isaacson ........................................................................... 369

The Dynamic Response Characteristics of Compliant Vertical Bottom-Pivoted Cylinders in Waves
Nicholas Haritos and Murray Townsend .................................................................................................. 377

Responses of an Articulated Tower in Waves and Currents
Moo H. Kim and Z. Ran ........................................................................................................................... 385

Setdown of a Moored Gravity Platform
B. Padmanabhan and R.C. Ertekin .......................................................................................................... 392

OFFSHORE STRUCTURES

Boundary Element Analysis on Three Dimensional Cracks in Sucker Rods
JiaQuan Wei, BoMing Zhong and TianYou Fan ....................................................................................... 401

Application of a Reduction Technique to the Nonlinear Dynamic Analysis of Offshore Structures
Breno Pinheiro Jacob and Nelson Francisco Favilla Ebecken ................................................................. 407

On Arbitrary Function in Terms of Bernoulli's Equation
Yuhua Fu .................................................................................................................................................. 414

Platform Continuance of Classification Program
David F. Grimm ........................................................................................................................................ 418

Current Practice for Design of Offshore Concrete Structures
Henrik Grosch, Dan-Evert Brekke and Erik Aldstedt ............................................................................ 425

Combining Case-Based and Rule-Based Reasoning for Offshore Structure Design
Chee-Kiong Soh and Ai-Kah Soh ............................................................................................................. 435

Pressure Vessel Inspection Program
David F. Grimm ........................................................................................................................................ 443

GEOTECHNICAL ENGINEERING

Some Aspects of Offshore Soil Dynamics
Vijay K. Puri, Braja M. Das and Shamsher Prakash ................................................................. 451

Load Distribution in a Pile Group
E. Evgin, F.W. Firlotte and J.C. Osler ................................................................. 462

Dynamic Analysis of Offshore Platform Due to Periodic Waves
H. Ishida, K. Kurosaki and T. Komura ................................................................. 468

A Use of Super Lime Pile Method for Improvement of Saturated Loose Sandy Soils
T. Mitsunari, N. Isemoto, M. Yasui, M. Shimoda, M. Bessho and M. Hanada ........................................... 475

Behavior of Shaft Capacity for Pile Under Cyclic Axial Loading in Clay
Z.C. Chen, J.X. Wang and B.Q. Ye ................................................................. 479

Model Pile Study of Friction Load Transfer in Clay
Sheng-Huoo Ni and Dai-Ming Wu ................................................................. 486

Permeability of Oil-Contaminated Sands
Echol E. Cook, Bimal C. Devkota and Byungchul Yeo ................................................. 491

Two-Dimensional Regional Analysis for Land Subsidence
Robert Yun-Pin Chin and Guang-Yih Sheu ........................................................................ 496

Sedimentation Rate and Mississippi Delta Sediment Instability
Charles E. Adams, Jr. and Harry H. Roberts ........................................................................ 503

Application of Dynamic Monitoring on Pile Installations in Sarawak Shell
James Foo Ee Kiu and Melvyn Tan ........................................................................ 511

Strip Foundation on Sand Underlain by Soft Clay with Geogrid Reinforcement

Re-Examination of Laterally Loaded Piles in Clays Using Improved p-y Curves
D. Wu, B.B. Broms and V. Choa ........................................................................ 522

The Effect of Cementation of Kc of Sand
Fanyu Zhu and Jack I. Clark ........................................................................ 528

Nonlinear Analysis of Incompressible Soil Foundation for Gravity Arctic Structures
Hong Ou Kim and Sukhyung Lee ........................................................................ 534

Creep of Plate Anchors in Soft Clay

Experimental Studies on Plate Anchors in Layered Marine Soils
S. Narasimha Rao and Y.V.S.N. Prasad ........................................................................ 544

Strength and Pore Pressure of Silty Clay Under Repeated Stress
Qijing Yang ........................................................................ 551
Soil-Mechanics Aspects of Seabed Instability
Ikuo Towhata and Masaharu Fukue ................................................................. 556

Dynamic Response of Poro-Elastic Seabed Around a Mooring Anchor with Pretension
Tomiya Takatani, Yoshi-hiko Maeno, Tetsuya Hiraishi and Tomotsuka Takayama ................. 567

Simulation Model for Unsteady Phenomena of Submarine Soil
Ryosuke Kitamura and Masami Uematsu ........................................................................ 573

Liquefaction and Densification of Loosely Deposited Sand Bed Under Water Pressure Variation
Hiroshi Nagai, Shiro Maeno, Takayuki Matsumoto and Yasushi Hachim ............... 578

Strength and Deformation Behaviour of Lime Treated Marine Clays
S. Narasimha Rao, G. Rajasekaran and K.V. Subba Rao ........................................ 585

Numerical Analysis of Wave-Induced Liquefaction in Seabed
Fusao Oka, Atsushi Yashima, Mitsuru Kato and Yutaka Nakajima................................. 591

Methodology of Estimation of Scouring Around Large-Scale Offshore Structures
Hidehiro Katsui and Takao Toue ................................................................................ 599

Elasto-Plastic Behavior of a Seabed Around a Concrete Block Due to Water Wave Pressure
H. Kuwahara and S. Ohmaki ..................................................................................... 603

Advanced Soil Improvement Methods for Liquefaction in Japan
T. Tabata, K. Shiota and T. Saito .................................................................................. 610

On the Scattering Problems of an Inclusion with Spring Contacts
Jen-Chung Sung and Deng-Ching Wong ........................................................................ 615

Geotechnical Study on Seabed Deposits in Osaka Bay
T. Matsui ..................................................................................................................... 622

Maritime Applications of Polymer Geogrid Technology
T.S. Croskey, Jr .......................................................................................................... 630

Deformation Behavior of Granular Material Along the Stress Path of Neutral Loading
Han-Wei Yang ........................................................................................................... 634

Soil Improvement for an Offshore Development Project: Development of Design Procedure
and Case History
Eun Chul Shin ............................................................................................................ 639

Effects of Calcium Carbonate on Geotechnical Properties of Sediments in Tokyo Bay
T. Nakamura, M. Fukue and K. Naoe ........................................................................... 647

Failure Criterion of a New Light Geotechnical Material SLS
Tej B.S. Pradhan, Goro Imai, Masamitsu Hamano and Yuji Nagasaka ............................. 652
The Seabed Response Under a Plane Progressive Wave
Khalid El-Zahaby and M.S. Rahman.............................................................660

Field Observation of Wave-Induced Porewater Pressures
T. Sakai, H. Mase, D.T. Cox and Y. Ueda .................................................667

Instability of Sand Seabed Near Shoreline and Wave-Induced Porewater Pressure
M. Shimizu and H. Noda ...........................................................................674

Pore Pressure Generation and Drainage Underneath Gravity Structures
R.P. Boeije, M.B. de Groot and P. Meijers ..................................................681

ADDITIONAL PAPERS

Response and Fatigue Damage Prediction of Jack-Up Platforms
S.T. Quek, C.G. Koh and X.M. Li.................................................................686

CONTENTS

VOLUME II, 1993

PIPELINES

Limit States of Pipes Under Tension and Bending
Yong Bai, Ragnar T. Igland and Torgeir Moan ................................................................. 1

Beam Mode Buckling of Buried Pipelines in a Layered Medium
Yaw-Jeng Chiou and Shue-Yeong Chi................................................................. 10

Towards Rational Deformation Limit States for Buried Pipelines
Zhilong Zhou and D.W. Murray................................................................. 18

Predicting the Bursting of Damaged Pipes by the FEM
K. Kormi and D.C. Webb .................................................................................. 25

Loads on a Prototype-Scaled Horizontal Pipeline in Intermediate Water
Frank Preser and Wilhelm Dursthooff................................................................. 32

The Lift Force on Pipeline in Waves with High Keulegen-Carpenter Number
Chia Chuen Kao and Heng Haur Chow ................................................................. 41

Oceanographical Measurements for the Sea of Marmara Crossing of the Hamidabad Natural
Gas Pipeline System
Adnan Akyarli and Yalcin Arisoy ........................................................................... 47

Effect of Ship Anchor Impact in Offshore Pipeline
A.I. AL-Warthan, J.S. Chung, H.-P. Huttelmaier and G.G.W. Mustoe.......................... 54

The Deformation of Freely Whipping Pipes
Wang Bin.............................................................................................................. 62
Effects of Hydrotecting on Pipeline Design Safety
Guoyang Jiao .................................................................................................................. 69

Self-Burial of Pipelines at Span Shoulders
B.M. Sumer and J. Fredsoe ............................................................................................... 74

Local Scour Around a Submarine Pipeline with a Spoiler Attachment
Yee Meng Chiew ................................................................................................................ 82

A Laboratory Study of Local Scour Beneath Submarine Pipelines in a Wave-Current
Interacted Flow
Faridah Jaffar Sidek and Abdul Aziz Ibrahim ........................................................................ 88

On the Mechanics of Spanning in Submarine Pipelines
Max Irvine ........................................................................................................................... 98

Analysis of Offshore Pipeline Flotation During Storms in Liquefiable Soils
Raj Siddharthan and Gary M. Norris .................................................................................. 106

Multiphase Production: Prototype Development and Application Study
Armando Favi and Giovanni Chiesa ..................................................................................... 114

Gas Entrainment in Liquid Slugs
O.J. Nydal and P. Andreussi ............................................................................................... 120

Slug Detection System for Two-Phase Flowlines
P. Andreussi, S. Pintus and O.J. Nydal ............................................................................... 129

A Model for Transient Analysis of Gas-Liquid Slug Flow in Pipelines of an Offshore
Well Head
T.N. Wong and A. Gilchrist ................................................................................................. 142

Flow Regime Behavior in the Vicinity of the Wellhead Flowline Junctions in Subsea
Completions
S. Song, A.D. Hill and A.L. Podio ....................................................................................... 151

Study of Flow Regime Transitions of Oil-Water-Gas Mixtures in Horizontal Pipelines
A-H. Lee, J-Y. Sun and W.P. Jepson ................................................................................... 159

Experimental Study of Slug Flow Characteristics in Horizontal, Multiphase Flows
X. Zhou and W.P. Jepson ................................................................................................. 165

Numerical Analysis of Non-Steady State Swirling Flow in a Vessel
Genichi Komatsu, Koichi Kameoka and Kazuhisa Matsumoto ........................................ 171

Direct Electrical Heating of Subsea Pipelines
Jens Kristian Lervik, Harald Kulbotten, Gunnar Klevjer and Terje Lauvdal ......................... 176
Application of Electric Heat Tracing System to Offshore Pipelines
H. Takaki, A. Iwasaki, S. Oiwa and J. Kuran..............................................................................................................185

A Simple Flexural Test Machine
D. Budney and S. Bouey..............................................................................................................................................190

Weight Reduction of Flexible Pipes Using Aluminium Alloys
Andre Sugier, Francois Ropital, Jose Mallen and Jean Rigaud ......................................................................................194

Limitation and Comparison of S-Lay and J-Lay Methods
Chul H. Jo........................................................................................................................................................................201

Plastic Design of Bends in Pipelines
A.M. Gresnigt and R.J. van Focken...............................................................................................................................207

The Statpipe Subsea Shore Approach Bridge Tunnel - Its Damage, Design Modifications and Repair
K. Harneshaug, K. Waagaard and B. Berge ......................................................................................................................220

Trends in Diverless / Remotely Controlled Hyperbaric Pipeline Tie-Ins
G. Hutt and I. Pachniuk......................................................................................................................................................226

Partial Stabilisation at St. Joseph
Mike McGuinness and Dave Cooke.................................................................................................................................235

Laying Arctic Gas Pipeline Across Baidaratskaya Gulf
R.M. Shakirov .................................................................................................................................................................242

The Use of a New PC Simulation Tool to Optimize the Offshore Oil Transportation Problem
Stephen J. Rowe and Alan H. Woodyard............................................................................................................................247

Microbial Induced Corrosion and Subsea Pipeline Failure
A.K. Samant and P.F. Anto..................................................................................................................................................254

Inspection of Offshore Pipelines by Using In-Line Inspection Tools
A.O. Barbian, M. Beller and W. Garrow..........................................................................................................................262

Prospects of Offshore Oil and Gas Pipelines Construction on the Russian Shelf
M.A. Kamyshev .................................................................................................................................................................268

RISERS, INSTALLATION & INSTRUMENTATION

Design and Installation of Snorre Field TLP Rigid Riser System
Frank K. Lim and Ragnar Nielsen......................................................................................................................................272

Dynamic Monitoring for Analysis Verification of Snorre TLP Rigid Risers
T. Lower and A. Skogvang..................................................................................................................................................280
**Lifetime In-Service Monitoring of the Emerald Instrumented Flexible Riser**
G J Lyons, H Mahlouji, M H Patel and D T Brown ................................................................. 286

**A Fully Compensated High-Pressure Riser Telescope**
Arnfinn I. Nergaard .................................................................................................................. 294

**Computational Analysis of Deep Water Risers During Installation and Hangoff**
Suzana Rastelli Sattamini and Agustin J. Ferranti ................................................................. 301

**Eigenvalues of a Long Vertical Pipe by DEM, FEM and Exact Solution**
H.-P. Huttelmaier, Jin S. Chung, G.G.W. Mustoe, Zhao-chang Zheng and Bao-rong Cheng ............ 311

**Strength of Threaded Connection for Lifting Pipes**
Kuniteru Ishikawa, Masao Morikawa, Yoshihi Ono, Noboru Kawasaki and Akio Shimanuki ............ 315

**Extreme Response of a Flexible Riser System Using a Complete Nonlinear Long-Term Approach**
Knut-Aril Farnes and Torgeir Moan .......................................................................................... 321

**Kinematics of Transported Mass Inside Risers and Pipes**
Tseng Huang ............................................................................................................................... 331

**MECHANICS OF CABLES AND MOORING**

**Optimization Methodology for Installation of Deep Ocean Ranges**
Solomon C.S. Yim, Mohamed Mtira and John W. Leonard .......................................................... 337

**Mechanics of Submerged Cables: Asymptotic Solution and Dynamic Tension**
J.A.P. Aranha, C.P. Pesce, C.A. Martins and B.L.R. Andrade ...................................................... 345

**A Robust Element for Static Analysis of Marine Cables**
H.R. Riggs and T.K. Leraand .................................................................................................... 357

**Axial Cable Stretching Due to Strumming and the Possibility for Resonance**
Samuel M. Welch and Marshall P. Tulin ..................................................................................... 364

**Modelling Tension and Torque Properties of Fibre Ropes and Splices**
C M Leech, J W S Hearle, M S Overington and S J Banfield ..................................................... 370

**Modelling the Long-Term Fatigue Performance of Fibre Ropes**
J W S Hearle, M R Parsey, M S Overington and S J Banfield ..................................................... 377

**Bruce Field Electrical Catenary Umbilical Novel Design for Hostile Environment Application**
J. Chaudhuri .................................................................................................................................. 384

**Development of an In-Line Splice for ROV Tether**
S.J. Banfield and F. Liu ............................................................................................................... 392

T. Takeuchi, K. Enoki, S. Okamoto and H. Saecki ..................................................................................585

Physico-Mechanical Model of Self-Excited Processes by Sea Ice Compacting
V.N. Smirnov, V.G. Korostelev and I.V. Stepanov ................................................................................589

Analysis of Spatial Heterogeneity of Ultimate Ice Compressive Strength
G.A. Surkov and P.A. Truskov ................................................................................................................596

Utility of Passive Observations for Operational Sea Ice Modelling
Venkata R. Nerala, Rene O. Ramseier and Warren J. Gross .................................................................600

An Analysis of Ice Rubble Shear Strength Data
J.C. Chao ..................................................................................................................................................607

Creep and Failure of Ice Under Monotonic Loading
Anatoly M. Fish .....................................................................................................................................613

Elastic-Plastic Analysis of Narrow Truncated Floating Ice Wedge
S.K. Choi and M.K. Yi ..............................................................................................................................619

Damage Evolution During Impact of an Ice Bar with Lateral Confinement
Dale G. Karr and Xin Sun .........................................................................................................................626

Preliminary Measurements of Acoustic Emission in Young Artificial Sea Ice
P.J. Langhorne, M.F. Tan and B.D. Russell ............................................................................................634

Method for Evaluation of First-Year Ice Hummock Strength
G.A. Surkov and P.A. Truskov ................................................................................................................640

Sea Ice Strength Variability Due to Various Ice Column Axis Orientation
A.M. Polomoshnov and P.A. Truskov .......................................................................................................643

ATMOSPHERIC ICING

An Heuristic Freezing Spray Model of Vessel Icing
R.Z. Blackmore and E.P. Lozowski ..........................................................................................................648

Icing on Insulator String of HV Transmission Lines and Its Harmfulness
Fuheng Su and Yimei Jia ..........................................................................................................................655

Helicopter Icing in VMC Below Low Stratus Clouds
Werner Fuchs ..............................................................................................................................................659

Ice Accretion on Conductors Energized by AC or DC: A Laboratory Investigation of
**Ice Treeing**
M. Farzaneh and J.-L. Laforte ................................................................. 663

**Flashover Performance of Insulators in the Presence of Short Icicles**
M. Farzaneh and O.T. Melo ........................................................................ 672

**ICE-BREAKING & NAVIGATION**

**The Northeast-Passage: A Nautical Challenge for the Next Century**
Norvald Kjerstad .................................................................................. 679

**Multipurpose Icebreaker for the Finnish National Board of Navigation**
Paavo Lohi and Tuomo Karppinen .......................................................... 686

**Development of Multipurpose Icebreaker and Offshore Construction Vessel: New Approach to Technical and Operational Requirements**
Terje P. Tellefsen and Lennart Hagelstam .......................................... 691

**A Study on the Stem Angle and Icebreaking Capability of Icebreaking Vessels**
Kyungsik Choi .......................................................................................... 699

**Experimental Investigations of Some Polar Sailing Problems**
F. Katsman, M. Ovsyannikov, A. Utkin and Y. Zaitsev .......................... 704

**Ice Transference of Bering Strait**
Lev P. Yakunin and Oleg N. Retinski .................................................... 710

**BROKEN ICE BEHAVIOR**

**The Effect of Waves on Pancake Ice Collisions**
Susan Frankenstein and Hayley H. Shen .............................................. 712

**A Model for the Motion and Bending of an Ice Floe in Ocean Waves**
Michael Meylan and Vernon A. Squire .................................................. 718

**Ocean Wave Propagation in an Ice Field with Varying Concentration**
Vernon A. Squire .................................................................................... 724

**Experimental Study on the Control of Ice Movement with a new Design of Ice Boom**
Kunio Enoki, Chimataro Ishii, Sei Kunimatsu, Toshihiko Yamashita and Hiroshi Saeki .......................... 730

**Study on Drift Ice Control Utilizing Arch Formation of Ice Floes**
Fumihiro Hara, Sei Kunimatsu, Hiroshi Saeki, Kunio Enoki and Yoshio Muraki ............................................. 736

**Discrete Element Modelling of Forces Exerted on a Boom for Ice Management**
Sveinung Loeset ...................................................................................... 742
Collision Events Between Adjacent Ice Floes Driven by an Ocean Wave Field
Philip J Rottier and Vernon A Squire ............................................................747

Studies on the Fluid Forces Acting on and the Movement Velocity of Floating Ice Floes
Kunio Enoki, Koji Hojo, Chimataro Ishii and Hiroshi Saeki ........................................752

Experiments of Crushing Interaction Between Ice Foes
Mohamed Sayed and Claude Daley...........................................................................758
The Proceedings of
The Third (1993) International
OFFSHORE AND POLAR
ENGINEERING CONFERENCE

VOLUME III, 1993

Waves, Breaking Waves, Coastal Engineering, Hydrodynamic Forces,
Dynamic Responses, Higher-Order Effects, Vortex Shedding & Oscillations,
Wind & Current Effects, Laboratory Modeling

CONTENTS

VOLUME III, 1993

OCEAN WAVES

The Use of Classical Maximum Likelihood Method for Estimating Directional Wave Spectra from Heave-Pitch-Roll Time Series  
E.K. Skarsoulis and G.A. Athanassoulis ................................................................. 1

Statistical Properties of Random Waves in Surf Zone  
Wen-Hen Yang and Chi Chao Tung................................................................................. 9

Some Characteristics for Waves Motion in Real Fluid  
Ho-Shong Hou and Chen Yang-Yin............................................................................ 16

Statistical Analysis of Wave Parameters for the China Sea  
G.Q. Yao, B.C. Ding, J.Y. Wang and Z.X. Ma............................................................. 22

Wave Group Evolution, Wave Deformation, and Breaking: Simulations Using LONGTANK, a Numerical Wave Tank  
Pei Wang, Yitao Yao and Marshall P. Tulin.................................................................. 27

Bow Impact and Deck Wetness: Simulations Based on Nonlinear Slender Body Theory  
Wusheng Song and Hajime Maruo............................................................................. 34

Surface Roughness in the Wake of a Steady Breaking Wave  
James H. Duncan............................................................................................................. 39

Laboratory Measurements of Breaking Inception and Post-Breaking Dynamics of Steep Short Crested Waves  
Ali R. Kolaini and Marshall P. Tulin........................................................................... 45

Wind Forcing and Breaking Dissipation Effects on Nonlinear Evolution of Energetic
Wave Groups
Jiyue J. Li ................................................................. 52

Acoustical Measurement of Laboratory Breaking Waves
Ali R. Kolaini ............................................................. 57

Wave Breaking Phenomena of Irregular Waves Combined with Opposing Current
Yu-cheng Li and Guo-hai Dong ........................................ 64

COASTAL ENGINEERING

Mean Wave Height Variations in the Northeast Atlantic (Jan. 1881 - Dec. 1989)
Gunnar Furnes and Magnar Reistad .................................. 71

Kinematics in a Groin Field: Data Analysis and Numerical Modelling
Herwig Noethel, Klaus-Peter Holz and Vallam Sundar .................. 76

Hamilton's Principle for Water Waves and the Green-Naghdi Theory
Do Young Kim ............................................................. 84

Numerical Simulation of Solitary Wave Runup on Slopes
Zhao-Chen Sun ........................................................... 90

Computation of Wave Breaking on Sloping Beach by VOF Method
Yongxue Wang and Tsung-chow Su ...................................... 96

Dissipation of Wave Height and Force by Flexible Floating Body
Tetsuya Hiraishi and Tomotsuka Takayama ................................. 102

A Numerical Model for the Prediction of Reflection Characteristics of Permeable Seawalls
V. Mallayachari and V. Sundar ........................................... 106

Laboratory Study of the Wave Pressure Acting on the Upright Breakwater with Slope Parapet
Gao Xiuli ................................................................. 111

HYDRODYNAMICS FORCES

Effects of Wave Directionality on the In-Line Loading of a Vertical Cylinder
John R. Chaplin, Kesavan Subbiah and Mehernosh B. Irani .................... 116

Extreme Wave Action on Large Horizontal Cylinders Located Above Still Water Level
Eng-Soon Chan .......................................................... 121

Random Wave Forces on Vertical Cylinders in Directional Seas
L. Rebaudengo Lando, G. Scarsi, S. Stura and A.C. Taramasso ............... 129

A Study on Random Wave Force Coefficients Using Numerical Simulation of Flow Field
Changhong Hu and Wataru Koterayama...................................................................................................................... 137

**Diffracted Wave Field and Dynamic Forces on Offshore Structures**
Keming Sun........................................................................................................................................................ 143

**The Statistical Distribution of Wave Current Forces Acting on a Slender Circular Cylinder in Irregular Waves**
Yu-cheng Li and Ming He .......................................................................................................................................... 151

**Extreme Nonlinear Wave Loads on a Vertical Truncated Circular Cylinder in Nonlinear Irregular Stokes-Like Waves**
Cheung Hun Kim, Willard J. Pierson, Jr. and Leo J. Tick .......................................................................................... 158

**Hydrodynamic Forces on Rectangular Cylinders Horizontally Submerged in Waves and Currents at Low KC Numbers**
D. Hamel-Derouich .................................................................................................................................................. 168

**Wave Forces on Vertical Circular Cylinders**
Jaw-Fang Lee and Yuan-Jyh Lan .................................................................................................................................. 176

**Estimation Method on Wave Force Acting on a Submerged Sphere**
Norimi Mizutani and Koichiro Iwata .......................................................................................................................... 184

**Hydrodynamic Forces Acting on a Floating Body in a Harbor of Arbitrary Geometry**
K. Takagi, S. Naito and K. Hirota .................................................................................................................................. 192

**PC-Based Wave Load Computation for Large Volume Multi-Column Structures**
M.H. Kim, R.S. Mercier, G. Gu, C. Wu and D. Botelho ............................................................................................... 200

**Hydrodynamic Force on Smooth Horizontal Cylinder in Uniform Oscillatory Flow**
Hai-gui Kang ............................................................................................................................................................ 208

**Nonlinear Wave Induced Seepage Force on Cylinder in Shallow Water**
D.H. Qiu, H. Wang and J. Zang ................................................................................................................................... 216

**Wave Loading and Runup Predictions for the Molikpaq Platform**
Michael Isaacsen and Ken Gaida.................................................................................................................................. 221

**An Evaluation and Extension of the Shallow Draft Diffraction Theory**
Bas Buchner ............................................................................................................................................................... 230

**Hydrodynamic Forces Acting on Finite-Length Circular Cylinder Oscillating in a Uniform Flow**
Kunihiro Hoshino, Shunji Kato, Masakatu Saito and Hiroshi Sato ........................................................................... 242

**Scattered Waves Around a Submerged Disk**
Xiping Yu and Allen T. Chwang .................................................................................................................................. 254

**An Optimum Configuration of Vertical Cylinders for Control of Incident Waves**
Yusaku Kyozuka and Kazunori Kitano ................................................................. 260

**A Sectional Model of Hydrodynamic Force on a Vibrating Cylinder in Current**
Zhijie Wu .................................................................................................................. 266

**Wave Slamming on a Horizontal Circular Cylinder**
Michael Isaacson and Sundar Prasad ................................................................. 274

**Impact Loading and Water Entrance Characteristics of Prismatic Bodies**
A.P. New, T.S. Lee and H.T. Low ........................................................................ 282

**Forces on and Flows Around a Horizontal Rectangular Cylinder Submerged in Regular Waves**
Shinichi Arai ............................................................................................................. 288

**Hydrodynamic Characteristics for Groups of Interacting Axisymmetric Bodies Submerged Near the Sea Surface or the Sea Bed**
S.A. Mavvakos ........................................................................................................ 294

**Numerical Boundary Element Computation of Submerged Body-Surface Wave Interaction**
Harijono Djodihardjo, Bonifacius B. Prananta and Silvester B. Aman .......... 304

**HIGHER-ORDER EFFECTS**

**Free Decaying Test and Simulation of Slow Drift Motion of Prototype Floating Structure "POSEIDON"**
M. Saito, S. Kato and Y. Ohkawa ............................................................... 312

**A Strip Theory for the Second-Order Wave Forces on Submerged Slender Bodies**
G.P. Miao, Y.Z. Liu and Z.X. Mi ...................................................................... 321

**Low Frequency Motions of FPSO in Short and Long Crested Waves**
Y. Inoue, W. Xue, N. Yamagishi and H. Yokozawa ........................................... 329

**A Second-Order Numerical Study of Low-Frequency Semisubmersible Motions**
D. Pizer and P. Sayer .............................................................................................. 337

**A Least-Square Finite Element Scheme for Motion Analysis**
Qing Qin and Terry D. Petty .................................................................................. 347

**The Significance of Slowly Varying Forces on the Design of Catenary Moorings for Semisubmersible Units**
R.V. Ahilan and J.H. Harrison ............................................................................ 352

**Low Frequency Motions of A Moored Ship in a Regular Wave Group with Sea Current**
Tadeusz Szelangiewicz .......................................................................................... 358

**Subharmonic Resonance of Mooring Buoy Drift Motion in Nonlinear Waves**
Jaming Wu and Yuanlin Li .................................................................................................................. 364

Time-Domain Second-Order Diffraction-Radiation by Two-Dimensional Floating Bodies
Joseph Y.T. Ng and Michael Isaacson ............................................................................................... 368

VORTEX SHEDDING & OSCILLATIONS

An Experimental Investigation of the Near Flow Around a Cylinder in a Reversing Planar Flow
I.A. Sibetheros, R.W. Mihsad and K.F. Lambrakos ............................................................................ 376

Finite Element Simulation of the Development of Vortex Shedding from a Pair of Circular Cylinders
Guang Ren and Jens G. Balchen ........................................................................................................ 384

An Engineering Approach to Characterize the Lock-In Phenomenon Generated by a Current on a Flexible Column
Laurent Foulhoux and Vincent Saubestre ......................................................................................... 392

Simulation of Flows Around a Rotating Cylinder by a Diffusing Vortex Scheme
Y.T. Chew, M. Cheng and S.C. Luo .................................................................................................... 404

Flow Around a Vortex-Excited Vibrating Cylinder in Planar Oscillatory Flow
Kenjuro Hayashi, Kouji Fujima and Toshiyuki Shigemura ................................................................ 409

The Cell Length of Vortex Shedding of Flow Around a Circular Cylinder
Shouping Dong ..................................................................................................................................... 417

Forces on a Pipeline Oscillating in Transverse Direction in Steady Current
B.L. Jensen, B.M. Sumer and J. Fredsoe ............................................................................................ 424

An Unsteady Wake-Source Model for Flow Past an Oscillating Body
S.C. Wong, Y.T. Chew, H.T. Low and K.T. Tan .................................................................................. 431

Viscous Forces Acting on Oscillating Roughened Cylinders
Koji Otsuka, Futoshi Niwa and Yoshiho Ikeda .................................................................................. 436

The Kinematics of Oscillatory Flows Past Cylindrical Structures
T. Bruce, W.J. Easson and C.A. Greatede ............................................................................................ 444

Transverse Oscillations of Elastically-Mounted Cylinders in Waves
N. Chioukh and R. Narayanan ............................................................................................................ 450

The Onset of Streamwise Vortical Structure and the Early Features of Coherent Structure Behind a 2-D Circular Cylinder
G.C. Ling and Z.B. Wu ......................................................................................................................... 458
WIND & CURRENT EFFECTS

Wind Effects on Offshore Platforms: A Wind Tunnel Model Study
H.T. Low and T.S. Lee......................................................................................................................466

Effect of Primary Resonance on Galloping of Tall Prismatic Structures
Mohamed Abdel-Rohman..................................................................................................................471

Shear-Flow/Free-Surface Interaction in a Density-Stratified Fluid
Athanassios A. Dimas and George S. Triantafyllou........................................................................479

The Computation of Relative Velocities by Geostrophic Method of Black Sea Waters in the West and in Front of the Bosphorus
N. Taspinar and T. Konuk..................................................................................................................487

The Linear Stability of Non-Parallel Boundary-Layer Flow Over Compliant Walls Subjected to Fluid Loading
W.K. Chong, K.S. Yeo and B.C. Khoo ..........................................................................................493

FLUID MOTION

Effect of Momentum Injection on the Fluid Dynamics of Bluff Bodies
V.J. Modi, A. Dobric and T. Yokomizo............................................................................................501

Waves Generated by a Ship Travelling in Stratified Water
Haw L. Wong and Sander M. Calisal ..................................................................................................514

Nonlinear Free Surface Flow Around a Vertical Cylinder During Earthquakes
Bang-Fuh Chen ..................................................................................................................................519

Dynamic Effects of Sea-Bed Motion on Fluid Flow
C.J. Tang...........................................................................................................................................523

Flow Past a Finite Length Circular Cylinder
S.C. Luo.............................................................................................................................................530

Numerical Simulation of Flow Around Two Cylinders in Various Arrangements
Yun Fat Chan and Kit Lam.................................................................................................................535

DYNAMIC RESPONSES

Fluid-Structure Interaction of Arbitrary Shaped Offshore 3-D Structures by Earthquakes
T. Nakamura and Y. Tanaka...............................................................................................................542

Experimental Study on Flexible Floating Circular Plates Subjected to Vertical Ground Motions
Ryuji Endo, Masahiro Ando, Takuji Hamamoto and Nobuyoshi Tosaka........................................550
### Real Time Motion Simulation of a Moored Semisubmersible for Dynamic Stability
K. Song, T. Petty and T. Bone ................................................................. 558

### Motions of Floating Bodies in Waves, Moored by Elastic Lines in a Sea with a Breakwater
Shuichi Nogata, Takashi Fujita, Seijiro Miyake, Toshiaki Makihata and Kazuki Oda ....................... 568

### Nonlinear Motions of Tethered Floating Buoys
John W. Leonard, Krisnaldi Idris and Solomon C.S. Yim ................................................................. 576

### Qualitative Behaviour of a Linear Oscillator Subjected to Motion-Dependent Wave Forces
Kai-Yang Lam, Chih-Young Liaw, Hin-Fatt Cheong and N. Jothi Shankar ................................. 582

### Stochastic Responses of Offshore Structures Under Multi-Directional Waves, Wave-Current and Fluid-Structure Interactions
H. Karadeniz ......................................................................................................................... 588

### Active Control Effects on Dynamic Response of Offshore Structure
Kenji Kawano ..................................................................................................................... 594

### A Study on Two-Dimensional Submerged Multiple-Bodies
L.H. Huang and J.K. Yong ................................................................................................. 599

### Motion and Hydrodynamic Pressure of Semi-Submerged Twin-Hull Body in Waves
Ming-Chung Fang and Wei-June Shyu ...................................................................................... 605

### A Frequency Domain Approach for Modelling the Dynamic Response of Offshore Structures to Hydrodynamic Loading in the Morison Regime
N. Haritos and Halil Karadeniz ................................................................................................. 613

### Effect of Lateral Keel and Blisters on Semisubmersibles for the Minimization of Heave Motion
Kazuo Nishimoto and Andre J.P. Leite ...................................................................................... 621

### Experimental Study of Motion of Single and Multiple Tankers Moored to SPM System
Hong Zhang and Ming-guang Sun .......................................................................................... 629

### Roll Damping of a Sharp-Cornered Barge and Roll Control by a New-Type Stabilizer
Yoshiho Ikeda, Toshifumi Fujiwara and Toru Katayama ............................................................ 634

### Dynamic Instability of a Parametrically Excited Ship Rolling Model
C.Y. Liaw ............................................................................................................................... 640

### The Linear Stability Derivatives of Series 60 Model by the Transient Maneuvering Method
Seung-Keon Lee, Jin-Ahn Kim and Hyo-Jae Jo ........................................................................ 648

### Nonlinear Coupling Responses of the Platform Rolling and Pitching in Regular Sea
Lin Yan, Ji Zhoushang and Yang You ..................................................................................... 653
Application of Path Integral Solution to Ship Rolling Motion
Sun H. Kwon, Dae W. Kim and Jung H. Chung .......................................................... 657

Experimental Evaluation of Offshore Supply Boat Performance in Calm Water and Waves – Part I
Robert Latorre ................................................................................................................ 661

LABORATORY MODELLING

Wave Field in a Laboratory Wave Basin with Partially Reflecting Boundaries
Michael Isaacsen and Thomas Mathai .............................................................................. 669

Practical Procedures for Estimation of Viscous Scale Effects in Model Testing of Floating Structures
Kjell Larsen and Erling Huse .......................................................................................... 677

Experimental Validation of Directional Wave Maker Theory with Side Wall Reflections
E.P.D. Mansard and M.D. Miles ...................................................................................... 686

Forces on Streamlined Bodies: Scale and Roughness Effects
V. Mishkevich .................................................................................................................. 694

ADDITIONAL PAPERS

Spatial Response Distribution of Large Floating Islands Subjected to Stochastic Waves and Seawakes
T. Hamamoto, H. Kamura, T. Misumi and Y. Tanaka ....................................................... 701

Aerodynamic Stability of Square, Trapezoidal and Triangular Cylinders
M.G. Yazdani, S.C. Luo, T.S. Lee and Y.T. Chew ............................................................. 709

Two- and Three-Dimensional Simulations of Vortex-Induced Vibration of a Circular Cylinder
H.M. Blackburn and G.E. Karniadakis ............................................................................. 715

CONTENTS

VOLUME IV, 1993

TUBULAR STRUCTURES

Overview of Current International Design Guidance on Hollow Structural Section Connections
Jeffrey A. Packer .................................................................................................................................................. 1

Parametric Study on Multiplanar K-Joints with Gap Made of Rectangular Hollow Sections
by Means of the Finite Element Method
F. Mang, S. Herion and O. Bucak ...................................................................................................................... 8

Fatigue Design Recommendations and Guidance for Repair on KK Multiplanar Gap and
Overlap Joints Made of Square Hollow Sections
E. Panjeh Shahi, J. Wardenier, A. Verheul, R.S. Puthli and D. Dutta ................................................................. 16

Fatigue Behaviour and Influence of Repair on Multiplanar K-Joints Made of Circular
Hollow Sections
A. Romeijn, J. Wardenier, C.H.M. de Koning, R.S. Puthli and D. Dutta ......................................................... 27

The Parametric Stress Analysis of Multiplanar Tubular DT Joint
Tie-yun Chen and Huiyuan Zhang .................................................................................................................... 37

The Distribution of SCF Along Hot Line of Tubular T-Joints
Li Shaofu and Xie Meng ........................................................................................................................................ 45

Study of Fatigue Limit Under Variable-Amplitude Loading Conditions
Yasumitsu Tomita, Kiyoshi Hashimoto, Naoki Osawa and Yoshihiro Nakamura .............................................. 48

Multiaxial Fatigue Study in Tubular Joints
A. Abel and S. Wu ............................................................................................................................................... 56

Fatigue Life of Repair-Welded Tubular Joints in Offshore Structures
Fatigue Life Prediction of Offshore Tubular Joints
S. Seetharaman, D.S. Sreedhar and A.G. Madhava Rao................................................................. 70

Procedure for Stochastic Fatigue Analysis of Forged Nodes for Offshore Platforms
Luigi Perna, Stefano Odorizzi, Renato Faccioli and Roberto Piva............................................... 77

An Analytical Procedure for Fatigue Damage in Offshore Structures
C.W. Woo and D.L. Li...................................................................................................................... 85

On Fatigue Crack Propagation Behavior Using a New Parameter - A
Sae-Wook Oh, Young-Chul Park, Chung-Weon Hue and Kwang-Young Kim............................... 92

The Effect of Loading Sequence on Fatigue Crack Growth of an Offshore Structural Steel
W. Zhang and R. Brook.................................................................................................................... 98

Fatigue Behaviour of Welded Hollow Section Joints and Their Connections Made of
High-Strength Steels
F. Mang, O. Bucak and H. Stauf....................................................................................................... 104

A Model for Fatigue Life Prediction of Offshore Welded Stiffened Steel Tubular Joints
Using FM Approach
D.S. Ramachandra Murthy, P. Gandhi and A.G. Madhava Rao..................................................... 117

Reserve, Residual and Ultimate Strength Analysis of Offshore Structures: State of the
Art Review
Colin J Billington, Helen M Bolt and J Keith Ward ........................................................................ 125

Ultimate Strength of Dented Tubular Steel Members
J.T. Loh............................................................................................................................................... 134

Structural Strengthening, Modification and Repair Techniques Implemented by Divers
or ROVs
M Lalani and A F Dier....................................................................................................................... 146

The Static Behaviour of Semi-Rigid Multiplanar Connections Between I-Beams and
Rectangular Hollow Section Columns
L.H. Lu, J. Wardenier and R.S. Puthli............................................................................................. 158

The Behaviour and the Static Strength of Unstiffened I-Beam to Circular Column Connections
Under Multiplanar In-Plane Bending Moments
G.D. de Winkel, H.D. Rink, J. Wardenier and R.S. Puthli ............................................................. 167

Stiffness and Yield Strength of Simple V-Joint of Offshore Structure
Keiji Nakacho and Yukio Ueda........................................................................................................ 175

The Ultimate Capacity of Multiplanar TT- and KK-Joints: Comparison with AWS and
API Design Codes

36
J.C. Paul, Y. Makino and Y. Kurobane ..................................................................................................................183

**Rotational and Axial Flexibility of Tubular T-Joints**
Iraj Hoshyari and Richard Kohoutek ..............................................................................................................192

**STEEL MATERIALS**

**Fatigue Strength of Fillet Welded Joints with Undercuts**
M. Onozuka, Y. Kumakura, O. Ushirokawa and I. Tsuji ..................................................................................199

**Analysis of Fatigue Strength Improvement by Weld Toe Grinding**
H.L.J. Pang ......................................................................................................................................................206

**Minimum Fracture Toughness Calculation for Fusion Welded Offshore Structures**
Guoyang Jiao ......................................................................................................................................................211

**Statistical Characteristics of Wave-Induced Load and Simulation Method of Wave Loading Pattern for Fatigue Design**
Yasumitsu Tomita, Hiroshi Kawabe and Tetsuji Fukuoka ..................................................................................216

**Development of As-Rolled Type HF-ERW Casings with High Resistance to Collapse**
Hiroshi Murayama, Motofumi Koyuba and Masafumi Shoji ...............................................................................222

**The Weldability and Properties of Duplex and Superduplex Stainless Steels**
R N Gunn ...........................................................................................................................................................228

**Large Duplex and Super Duplex Forgings for Subsea Applications**
G. Hochoertler and K. Haberfellner ..................................................................................................................234

**MEASUREMENTS & APPLICATIONS**

**Development of Bi-Metallic Tubular Connections**
M. Ogasawara, F. Khoyama and E. Tsuru ........................................................................................................239

**Analysis of C-Core Sandwich Plate Decking**
T.C. Fung, K.H. Tan and T.S. Lok ....................................................................................................................244

**The Young's Modulus and Residual Stress of CVD-Coated Film**
Masaaki Ohtsuka, Hideaki Matsuoka, Yukio Hirose and Hitoshi Ishii ..................................................................250

**Young's Modulus of Surface-Layer of Thin Film**
N. Takano, H. Notoya and Y. Hirose ...................................................................................................................258

**Testing and Evaluation of Materials for Metal Seated Ball Valves**
C.H. Ahlen and T. Wenn ....................................................................................................................................261
CORROSION FATIGUE & SSC A

Optimization of Crack Length Measurement by DCPD in DCB Specimens
J. Yu, J.C. Barker and R. Brook………………………………………………………………………………...268

Some Environmental Aspects of Sulphide Stress Corrosion Cracking Stainless Steels
J.C. Barker, J. Yu, R. Brook and M.B. Kermani……………………………………………………………………...273

Influence of Additional Elements on SCC Resistance in Extruded Al-Zn-Mg-La System Alloys
Y. Kishi, Y. Hirose, I. Tsukuda, S. Nagai and K. Higashi………………………………………………………………279

Effect of Mode I and Mode II Loading on Behavior of SCC Initiation in High Strength Steel
Masayuki Syouzu, Yukio Hirose and Zenjiro Yajima……………………………………………………………………...285

Stress Corrosion Cracking of Type 316 Steel Single Crystals in Chloride Solution
H. Uchida, S. Inoue and K. Koterazawa………………………………………………………………………………………291

Fractography of Crack Growth in Stress-Corrosion Cracking and Corrosion Fatigue of a Number of Offshore Steels
I.S. Cole and R. Brook……………………………………………………………………………………………………………296

Fractal Character of Stress Corrosion Cracking in SNCM439 Steel
Masashi Kurose, Masaaki Tsuda and Yukio Hirose …………………………………………………………………………303

Cathodic Protection and the Thickness Effect: A Final Conclusion?
I.S. Cole, O. Vittori and G. Cerretti……………………………………………………………………………………………309

Durability of GFRP in Corrosive Environment

Preferential Corrosion Properties in CO₂ Containing Environment and Mechanical Properties of Welded Joints of Line Pipes
Shigeru Endo, Moriyasu Nagae and Takashi Wada……………………………………………………………………………321

BEM Analysis of Potential Distribution in Harbor Structures Under Cathodic Protection
M. Iwata, Y. Huang and Y. Fujimoto ………………………………………………………………………………………………327

Synergic Effects of Offshore Well Casing Protection and Corrosion Survey
P.F. Anto and R. Dutta……………………………………………………………………………………………………………334

COMPOSITE MATERIALS

Behavior of Fiber-Reinforced Plastics as Construction Materials in Extreme Environments
Piyush K. Dutta and Richard G. Lampo…………………………………………………………………………………………339

Accelerated Testing of Fiber Reinforced Polymer Plates to Predict Long-Term Behavior
Salem S. Faza, Hota V.S. GangaRao and Seshagiri Ajjarapu…………………………………………………………………345
Characterization of Fatigue Behavior of Fiber Reinforced Plastic Beams and Joints
Hota V.S. GangaRao, Sotiris N. Sotiropoulos and V. Nagaraj .................................................................351

Advanced Flexible Pipe Materials for Aggressive Hydrocarbon Service
R.T. Hill and J.C. Measamer ..........................................................................................................................359

Diagnosis of the Subsequent Failure Mechanisms of Composite Laminates
S.C. Max Yen, M.A. Wright and P. Stumpff ..................................................................................................365

Vibration Analysis of Symmetrically Laminated Composite Rectangular Plates
J.H. Chung and T.Y. Chung .........................................................................................................................373

Characterization and Sintering Behaviors of SiC Whisker-Reinforced Al2O3 Composites by Composite Powders with Amorphous Silica Coatings
Chih-Cheng Chen, Fu-Su Yen and S.C. Max Yen ......................................................................................380

WELDING TECHNOLOGY

HISTAR Offshore: Weldability Aspects of Quenched and Self-Tempered Steel Sections for Offshore Applications
Jean de la Hamette, Fernand Becker, Guy Lessel, Jean-Michel Dengler and Patrick Seil .....................386

Computer-Aided Design of Welded Tubular Connections
Suen, Der Shiuan and John H. Wu ...............................................................................................................393

The Weld Zone Hardness and Serviceability of Zeron 100 Super Duplex Stainless Steel
C.F.G. Baxter, J. Irwin and R. Francis ...........................................................................................................401

Welding of Zeron 100 Super Duplex Stainless Steel
C.F.G. Baxter, A.W. Stevenson and G.R. Warburton ................................................................................408

Welding of the Super Duplex Stainless Steel Sandvik SAF2507™ (UNS S32750)
Sven-Ake Fager and Lars Odegard ............................................................................................................416

The Transport Properties of Argon Rich Shielding Gas in Hyperbaric Welding
Yoji Ogawa ....................................................................................................................................................424

Fuzzy Control of Arc Length in Hyperbaric TIG Arc Welding
Y. Suga, T. Suetomi and K. Kobayashi .......................................................................................................429

Qualification Trials of the "MOSS" Modular Orbital Welding System
V.R. dos Santos, J.C. Teixeira and J.F. dos Santos ....................................................................................434

Automatic Welding Procedures for X80 Pipeline Systems
R.A. Teale and Milton Randall .....................................................................................................................441

NDT, MEASUREMENTS & INSPECTION
Influence of Inevitable Uncertainties on Inspection Planning for Deteriorating Structures
Y. Fujimoto, A.M. Swilem, Z. Zong, M. Iwata and K. Nagai .................................................................445

Non-Destructive Evaluation of Toughness for In-Service Superheater Tubes of Fossil Fuel Boiler
F. Nogata, K. Seo, M. Kusaka, H. Takahashi, Y. Hirose, Jae-Wook Oh and K. Matsuji ..............................454

X-Ray Stress Measurement of WC-Co Alloy: X-Ray Study of Plastic Deformation of WC-Co Alloy
Myung-Hwan Boo, Saek-Wook Oh, Noboru Takano, Yoichi Kishi and Yukio Hirose ..................................458

Computer Aided X-Ray Radiography Image Processing Inspection for Welding
Kun-Li Wen, Jiunn-Liang Lin and Shi-Shing Chang ..................................................................................462

Using the Analysis of Stress Wave to Build the Research and Experiment of Ultrasonic Film Measurement
Shi-Shing Chang, Der Shiu-an Suen and John H. Wu .............................................................................467

MECHANICS & MARINE APPLICATIONS

Structural Response of Underwater Half Drop Shaped Shell
Y. Yasuzawa ........................................................................................................................................475

Dynamic Stiffness Analysis of Circular Cylindrical Shells
A.Y.T. Leung and W.E. Zhou ..................................................................................................................482

Conventional Roof, Unconventional Approach
Y.T. Huang ........................................................................................................................................489

On the Unusual Properties of Circular Cylindrical Pressure Shells and Countermeasures
Zuoshui Xie and Jiping Xu .......................................................................................................................493

Ultimate Longitudinal Strength of a Bulk Carrier
Tetsuya Yao and Plamen Ivanov Nikolov ..................................................................................................497

Effect of Attachment Length on Stress Intensity Factors of Surface Semi-Elliptical Cracks at Toe of Fillet Welds
S.T. Lie ..................................................................................................................................................505

Dimensional Method in Structural Optimization
Daniel M. Rosiyd ....................................................................................................................................510

Full-Range Nonlinear Analysis of Fatigue Behavior of Reinforced Concrete Structures by Finite Element Method
Yu-pu Song, Shun-bo Zhao, Rui-min Wang and Shu-yao Li ....................................................................520

Finite Element Analysis for Plastic Large Deformation and Anisotropic Damage
I.S. Nho, Jong G. Shin and S.J. Yim ......................................................................................................................... 526

**Creep-Buckling Analysis of a Simply-Supported Viscoelastic Beam**
Jong Gye Shin and Jong Kui Kim ............................................................................................................................ 533

**Elastoplastic Optimal Design of Frame and Truss Structures Using Repeated Sensitivity Analysis**
Masahiko Fujikubo, Tetsuya Yao, M. Abdul Rahim and Yuji Murakami ................................................................. 538

**Dynamic Behavior of a Ship Hull on Still Water Surface Due to a Moving Load**
Jong-Shyong Wu and Jer-Jia Sheu .......................................................................................................................... 546

**Global Strength Analysis of a Floating Body in Irregular Waves**
Ximning Tang and Yungang Liu ............................................................................................................................... 554

**Structural Optimal Design with Consideration of Normal Maintenance and Failure Cost During Its Service Life**
Mingcheng Zhu and Xila Liu ..................................................................................................................................... 561

**RELIABILITY**

**Reliability Assessment of a Flexible Pipe Hanging in a U-Shape**
Nils Terje Nordsve and Sverre Haver ....................................................................................................................... 566

**Reliability Analysis of Production Ships**
Xiaozhi Wang, Torgeir Moan and Guoyang Jiao ..................................................................................................... 575

**Failure Probability of Southern North Sea Platform Under Environmental Loading**
M. Si Boon, L. Vanderschuren, J.W. van de Graaf and P.S. Tromans ........................................................................ 585

**Variability in Load and Strength for a Jack-Up Structure**
Jan Inge Dalane, Sverre Haver and Ivar Langen ......................................................................................................... 592

**Reliability Analysis of Drag-Dominated Offshore Structures**
Daniel Karunakaran, Bernt J. Leira and Torgeir Moan ............................................................................................... 600

**Reliability of Offshore Jackets Using Point Estimation**
Krishnaayengar Rajagopalan ..................................................................................................................................... 606

**Reliability Analysis of Deep Water Pipelines During Laying, for Combined Pressure, Tension and Bending Loads**
Ragnar T. Iglund and Torgeir Moan ........................................................................................................................ 613

**Reliability Analysis of Torsional Strength on Ship Hulls by Means of Stochastic Transfer Matrix Method**
Wenjiao Shao and Yunlong Jin .................................................................................................................................. 622

**Structural Reliability Analysis of Cracked Tubular Joints**
