CONTENTS

VOLUME I, 1996

OFFSHORE RESOURCES AND TECHNOLOGY

The Heidrun TLP and Concept Development for Deep Water
T. Munkejord ....................................................................................................................................................... 1

Hibernia GBS - The Construction Process
Arne Bjørlo and Pierre Jérôme.......................................................... 12

PLENARY PRESENTATION

Liquefaction of Reclaimed Lands Along Osaka Bay by Great Hanshin Earthquake (1995.1.17)
Yasuo Tanaka ..................................................................................................................................................... 20

OCEAN RESOURCES AND DYNAMICS

The Optimum Design of a Stepped Pipe String for Mining Manganese Nodules with
Consideration for Reducing Its Maximum Axial Stress
Kazuo Aso, Katsushige Kan, Hitoshi Doki and Takuichi Maeda ................................................................. 29

Effects of Axial Dampers and Elastic Joints on the 3-D Dynamic Responses of a Deep-Ocean
Pipe with Torsional Coupling
Baorong Cheng and Jin S. Chung ...................................................................................................................... 37

Evaluation of Submerged High-Pressure Waterjets for Deep Ocean Applications
D.G. Alberts and M. Hashish......................................................................................................................... 46

Investigation of Possibility to Apply Untraditional and Ecologically Good Methods of
Coal Mining Under Sea Bed
Yu. Niskovskiy and A. Vasianovich.......................................................... 51

Environmental Studies on a Reference Transect in the IOM Pioneer Area
# OCEAN ENERGY

**Aerodynamic Losses Incurred by the Wells Turbine**
R. Curran and L.M.C. Gato ................................................................. 58

**A Simple Theory of Impulse Turbine with Self-Pitch-Controlled Guide Vanes for Wave Power Conversion**
M. Inoue, K. Kaneko and T. Setoguchi ............................................. 66

**Air Turbine with Self-Pitch-Controlled Blades for Wave Energy Conversion**
T. Setoguchi, K. Kaneko, M. Takao and M. Inoue .............................. 70

**Running Characteristics of a Cross-Flow Water Turbine in Oscillating Flow**
J. Fukutomii and Y. Nakase ............................................................... 75

**Wave Interactions with an Oscillating Water Column**

**Dynamic Non-Linear Response of OWC Wave Energy Devices**
A. Clément ........................................................................................ 91

**Study on the Power Generation from Tidal Currents by Darrieus Turbine**
S. Kiho, K. Suzuki and M. Shiono .................................................... 97

**The Estimation of Tidal Energy of the Okhotsk Sea for Practical Usage**
L.P. Yakunin and T.I. Tarkhova ......................................................... 103

**The Systematic Design of Economic Wave Energy Converters**
Michael French and Rob Bracewell .................................................. 106

# ENVIRONMENT TECHNIQUES

**Hydrodynamics of Offshore Gas Well Blowouts**
Bao-Shi Shiau .................................................................................. 111

**Assessment of Drilling Mud Design for the Offshore Oil Research**
Raffaele Romagnoli .......................................................................... 118

**A Three-Dimensional Model of the East China Sea**
K.M. Han and B.H. Choi ................................................................ 121

**Mitigation Around Saemangeum Bay in Korea**
Moon Seup Shin, Tetsuo Yanagi and Sung Kun Hong ......................... 128

**Experimental Research on an Air Mixed Jet Pump for Sea Water Purification**
Katsuyuki Kawaguty, Hironobu Ueki, Seiji Akamine and Takashi Umeoka .................................................................. 134

</table>
Offshore Guyed Tower Behaviour Under Wave and Transient Seismic Forces
A.K. Jain and R.S. Bisht ................................................................. 247

CASALM (Catenary and Single Anchor Leg Mooring) Single Point Mooring
John F. Flory ................................................................. 255

SPAR PLATFORMS

Status of Spar Platforms for Deepwater Production Systems
John E. Halkyard ................................................................. 262

Effects of Second Order Diffraction Forces on the Global Response of Spars
B.B. Mekha, D.C. Weggel, C.P. Johnson and J.M. Roesset ................................................................. 273

Nonlinear Coupled Responses of a Tethered Spar Platform in Waves
Z. Ran and M.H. Kim ................................................................. 281

Dynamic Response and Runup on Spar Platforms
O.R. Rijken and J.M. Niedzwecki ................................................................. 289

Slow Motion Responses of Compliant Offshore Structures
Peimin Cao and Jun Zhang ................................................................. 296

FLOATING STRUCTURES AND PRODUCTION

Evaluation of Sloshing-Induced Fatigue Damage on a FSO Tanker
Guido Casella and Mario Dogliani ................................................................. 304

DECOMMISSIONING & DESIGN

Decommissioning & Removal Options: Which Choice?
A. Della Greca ................................................................. 314

Response of Offshore Structures to Explosion Loading
B.A. Izzuddin and D. Lloyd Smith ................................................................. 323

Detail Investigation on Offshore Stabbing Guides
Chul H. Jo ................................................................. 331

Exploratory-Developmental Engineering Method's Suggestion for the Oil-Gas Rich Zones in the Extreme Shallow-Water Area of Zhangjube in Bohai Bay, China
Changming Zheng and Fushan Zhang ................................................................. 337

LARGE FLOATING STRUCTURES

Interaction Between Tsunami and Artificial Floating Island
Ken Takagi ....................................................................................................................................................... 341

**Elastic Behaviors of a Huge Floating Structure**
*H.S. Shin and D.J. Yum* .................................................................................................................................... 347

**Stochastic Determination of Mooring Stiffness of Large Floating Islands**
*Takuji Hamamoto, Masaki Tokubuchi, Takahiro Aoki and Yasuo Tanaka* ................................................... 354

**3D BEM-FEM Coupled Hydroelastic Analysis of Irregular Shaped, Module Linked Large Floating Structures**
*Takuji Hamamoto, Takayuki Hayashi and Ken-ichi Fujita* ............................................................................ 362

**GEOTECHNICAL ENGINEERING: Properties of Soil**

**Geotechnical Soil Properties in the Norwegian Deep Water Vøring Basin**
*Tom R. Guttormsen, Hans Langø and Stein Christensen* ........................................................................ 370

**A Non-Associative Bounding Surface Plasticity Model for Marine Sands**
*Q.S. Yang* .......................................................................................................................................................... 377

**Geotechnical Properties of Soft Marine Clay in Korea**
*Yeong-Mog Park, Eun Chul Shin and Sang-Ro Ahn* ........................................................................................ 385

**Undrained Cyclic Shear Strength of Undisturbed Marine Clay**
*Masayuki Hyodo and Teruhisa Fujii* ................................................................................................................ 391

**Nonlinear Analysis on Stress-Strain Relation of Reclaimed Soil**
*L.K. Chien, W.T. Lin and C.C. Cheng* ............................................................................................................. 395

**Kinetics of Naphthalene Removal from Sand and Kaolinite/Sand Soils Using SDS Surfactant**
*Mohammed A. Gabr, Russell Thomas, Echol E. Cook and Kurt Shoblom* .................................................... 402

**Gibson's Equation of Soil Consolidation in Convective Coordinate and a Method for Obtaining Solutions**
*Hin-Chi Lei, Huei-Wen Chang and Ming-Jui Hung* ........................................................................................ 408

**GEOTECHNICAL ENGINEERING: Soil Mechanics**

**Construction of New Seoul International Airport on Reclaimed Land**
*Sang Choo Lee, Kyu-Jin Lee and Eun Chul Shin* ............................................................................................ 415

**Judgment Method of Reinforcement Failure Mode in Steel Grid Reinforced Earth**
*T. Matsui, Y. Nabeshima, N.U. Amin and K. Uchihata* .................................................................................. 420

**Large and Small Strain FE Analyses of CRS Consolidation Tests of Soft Marine Clays**
*M. Shimizu* ........................................................................................................................................................ 424

**Using Artificial Neural Networks to Predict Shear Modulus of Granular Offshore Sediments**
Salome Romero and Sibel Pamukcu .................................................................................................................. 431

Ocean Wave-Induced Stress States of Seabed Beneath a Breakwater
Ken-ichi Sato, Kazuya Yasuhara and Nobuo Yoshida .......................................................... 438

Determination of the Saline Soils Creep Parameters in Yamal Peninsula
V.I. Aksionov and A.P. Afonin ................................................................................................................. 444

Strength and Consolidation Properties of Soils Which Have Suffered Stress Histories
Takaharu Shogaki and Tadashi Yoshida .............................................................................................. 450

A Constitutive Model for Consolidation Based on Microscopic Consideration by Probability Theory
Ryosuke Kitamura and George Kisanuki ............................................................................................... 456

Improvable Characteristics of Marine Clay by Soil-Cement Mixing Method
Bang-Woong Shin, Bong-Jik Lee and Se-Wook Oh ................................................................................ 460

Depression of Soil Moisture Freezing Point and Relationships for Native and Compact Soils
V.I. Fedorov .............................................................................................................................................. 465

Trench Stability Analysis
Jiin-Song Tsai and Jia-Chyi Chang ..................................................................................................... 469

Estimation of the Parameters of Seepage Through an Earth Dam
Mahmudul Alam Chowdhury, Masato Kunitake, Fumiyoshi Kondo, Hitone Inagaki, Hidehiko Ogata, Masaki Saito and Itsuro Kakuda ..................................................................................... 477

GEOTECHNICAL ENGINEERING: Pile Foundation

Analysis of Pile Supported Offshore Structures Under Wave Loading
Shamsher Prakash, Sanjeev Kumar and V.K. Puri ................................................................................ 483

Cyclic Loading Regime of Offshore Piles
U.A.A. Mirza ......................................................................................................................................... 491

Comparative Sensitivity Analysis of Laterally Loaded Piles
B.B. Budkowska and E. Cean ............................................................................................................... 499

Sensitivity of Probabilistic Pile Design to Various Uncertainties
Gurdev Singh, W.T. Lai and Braja M. Das .......................................................................................... 506

Behaviour of Batter Anchor Piles in Marine Clay Subjected to Vertical Pull Out
S. Narasimha Rao and C. Veeresh ........................................................................................................ 514

Behaviour of Laterally Loaded Model Pile Groups in Clay
S. Narasimha Rao and V.G.S.T. Ramakrishna ..................................................................................... 520
GEOTECHNICAL ENGINEERING: Foundation

**Bearing Capacity of Strip Foundation on Geogrid-Reinforced Sand-Scale Effects in Model Tests**
B.M. Das, V.K. Puri, M.T. Omar and E. Evgin ................................................................. 527

**Strip Foundation on Geogrid-Reinforced Clay: A Tentative Design Procedure**
B.M. Das, E.C. Shin and G. Singh .................................................................................. 531

**Dynamic Response of Caisson with Suction on Soft Seabed**
Tomiya Takatani, Yoshi-hiko Maeno, Shigeo Takahashi and Ken-ichiro Shimosako ........ 536

**Suction Beneath Cylindrical Anchors in Soft Clay**
Manoj Datta and Pankaj Kumar ....................................................................................... 544

**Design of Deep Foundations Using the Pressuremeter Method**
F. Azizi and R. Frank ........................................................................................................ 549

ADDITIONAL PAPERS

**Emergency Dumping of Large Oil Inventories**
T. Al-Hassan, J.N. Edmondson and J.G. Krol ................................................................ 558

**Limit State Design with Load Dependence in Offshore Foundations**
Yude Lin .............................................................................................................................. 562

**Stresses and Strength of Padeye to Circular Pipe Connection**
Y.S. Choo, K.H. Lee and W.H. Lee .................................................................................. 570

CONTENTS

VOLUME II, 1996

PIPELINES

The First Offshore Gas Pipeline Project in Vietnam
Chul H. Jo ................................................................................................................................. 1

Pipeline Riser Failure Investigation
C.P. Ellinas, R. Davies and B. King ............................................................ 11

Technical Outline of High Strain Based Design for Marine Pipelines
T. Sriskandarajah, T. Sreetharan and R.G. Carmichael ......................................................... 19

Re-qualification of Pipeline Systems
Leif Collberg, Espen H. Cramer and Ola H. Bjørnøy ......................................................... 27

Zeepipe IIA Pipeline: Strains Measured During Laying and Predictions
O.B. Ness, G. Hjartholm, R.L.P. Verley and O.G. Thorsen .................................................... 35

Transmission Pipeline System for Development of Shtockmanovskoye Gas Field
in the Barents Sea
M.A. Kamyshev and H.R. Vermeulen .................................................................................. 41

Study of the Offshore Pipeline Installation Based on the Pipeline Experiment
H. Shin, J.B. Kim, S. Hara and K. Yamakawa ...................................................................... 48

On the Application of Rentis Method for Offshore Pipeline Installation
S. Soemantri and G. Pradnyana .......................................................................................... 56

Analysis of Expansion Curves for Subsea Pipelines
Olav Fyrileiv, Olav Aamlid and Asle Venås ........................................................................ 66

Subsea Pipeline Lateral Deviation Due to High Temperature Product
Naum Y. Kershenbaum, Gary E. Harrison and Han S. Choi ............................................. 74
Effect of Local Buckling on Burst Pressure
A.M. Gresnigt, R.J. van Foeken and S.L. Chen ................................................................. 80

A Plane Strain Analysis of Corroded Pipelines
Hong Ou Kim and James A. Maple .................................................................................. 89

Residual Strength of Pipelines in Hydroelectric Power Plants
Luís A.P. Simões da Silva and Rui A.D. Simões ................................................................ 95

Sediment Transport and Morphological Changes Caused by Underwater Pipeline in the Kara Sea
Svetlana G. Beloshapkova, Alexander V. Beloshapkov and Igor O. Leont'yev ...................... 105

Current-Induced Vibrations of Submerged Floating Tunnels
Katta Venkataramana, Susumu Yoshihara, Shozo Toyoda and Yorikazu Aikou .................. 111

Numerical Simulation of Irregular Temperature Field Around Shallow Pipe in Soil Medium
B.B. Budkowska and I. Kreja .......................................................................................... 119

Optimization of Fuzzy Membership Functions Using the Random-Search Method and Its Application to Direct Digital Control in Pipelines
Hitone Inagaki, Masato Kunitate, Fumiyoshi Kondo and Masaki Saito ............................. 126

Large Eddy Simulation Scheme of Pipeline Under Regular Wave Action
Ge Wang, Guozhang Lai and Yucheng Li ........................................................................ 132

Studies of Multiphase Flow in High Pressure Horizontal and +5 Degree Inclined Pipelines
Robert Wilkens and W. Paul Jepson ............................................................................... 139

MARINE RISERS, CABLE & MOORING MECHANICS

Simulation of Dynamic Response of a Riser System under Wave-Crest Loads
Yousun Li ......................................................................................................................... 148

An Efficient Metal Riser Configuration for Ship and Semi Based Production Systems
D. Karunakaran, N.T. Nordsve and A. Olufsen ................................................................ 156

First-Order Dynamic Variation of Curvature and Tension in Catenary Risers
C.P. Pesce and M.O. Pinto .............................................................................................. 163

On the Mechanical Hysteresis and Bending Stiffness of Conductors and Cables
Peter Hagedorn and Ulrich Gutzer .................................................................................. 175

Modelling Heat Build-Up in Large Polyester Ropes
M.S. Overington and C.M. Leech .................................................................................... 182

Effect of Lay Angle on Various Characteristics of Spiral Strands
M. Raoof ......................................................................................................................... 189

Characteristics of Locked Coil Cables Under Coupled Axial/Torsional Loading

CONTENTS

VOLUME III, 1996

PLENARY PRESENTATION

The Evolution and Structure of Energetic Wind Waves
M.P. Tulin, Y. Yao and A.K. Magnusson ................................................................. 1

NUMERICAL AND NONLINEAR WAVES

Nonlinear Phenomena in the Motions of Unrestrained Bodies in a Numerical Wave Tank
Giorgio Contento ........................................................................................................ 18

Fully Nonlinear Diffraction Due to a Vertical Circular Cylinder in a 3-D HOBEM Numerical Wave Tank
S.Y. Boo and C.H. Kim ............................................................................................... 23

Active Absorption in a Numerical Wave Tank
Jesper Skourup ........................................................................................................... 31

Analytic-FEM Modelling of Flexible Wavemaker Problems
J. Lee and S. Huang .................................................................................................... 39

A Note on Preconditioned GMRES Solver
J. Zou and C.H. Kim ................................................................................................. 44

Far Field Condition for Nonlinear Scattered Waves
S. Chen and S.D. Sharma .......................................................................................... 50

Deterministic Decomposition of Irregular Short-Crested Surface Gravity Waves
Igor Prislin, Jun Zhang and Peter Johnson ............................................................... 57

Theoretical Analysis of Directional Waves in a Laboratory Basin
A.N. Williams and W.W. Crull .................................................................................. 65
Laboratory Study of Wave-Current Interaction
Michael J. Briggs and Zeki Demirbilek ................................................................. 73

A Boussinesq Model for a Wave-Current Interaction System
X. Ren and K.-H. Wang ........................................................................................................ 81

Refraction-Diffraction Model for Irregular Wave and Multidirectional Spectrum with Current
Yu-Cheng Li and Yong-Gang Zhang .............................................................................. 87

The Interaction of Nonlinear Water Wave and Porous Bed
T.W. Chen, L.H. Huang and C.H. Song ............................................................................... 90

WAVE STATISTICS

World-Wide Characteristics of Hs and Tz for Long-Term Load Responses of Ships and Offshore Structures
Elzbieta Bitner-Gregersen, Denis Bonicel, Hafedh Hajji, Michel Olagnon and Guy Parmentier ........... 95

Statistical Properties of Simulated Random Waves
John Z. Yim and S.-S. Shiao .............................................................................................. 103

Wave Height Distribution Around a Large Cylinder in Waves and Current
S.S. Hsiao, M.C. Lin and John Z. Yim ............................................................................. 108

Quick Assessment of Metocean Parameters: CLIOSat, a Product Using Satellite Data
S. Loeul, H. Hajji, D. Bonicel, P. Charriez and P. Lasnier .................................................. 115

MEASUREMENTS AND INTERNAL WAVES

Exact Numerical Solutions to Large Amplitude Internal Solitary Waves
W.A.B. Evans ...................................................................................................................... 124

Linear and Non-Linear Internal Tides Around the European Atlantic Shelf Edge
T.J. Sherwin, A.C. Dale, M.E. Inall and D.R.G. Jeans ....................................................... 131

An Underwatervideomicroscope to Determine the Size and Shape of Suspended Particles by Means of Digital Image Processing
V. Baier and W. Bechteler ................................................................................................. 138

Experimental Study of Flow Fields Around Cylinder Arrays Using PIV

A Numerical Model for Fluid-Particle Flows
F. Lalli and A. Di Mascio .................................................................................................... 151

BREAKING WAVES
Nonlinear Wave Groups
Ming-Yang Su ................................................................................................................ 158

Numerical Analysis of Wave Breaking Due to Submerged Structure
Koji Kawasaki and Koichiro Iwata ..................................................................................... 168

Nonlinear Behavior of Two-Crossing Waves in Finite Water Depth
Takashi Tomita, Yoon-Koo Kang, Katsuhiko Kurata and Koichiro Iwata ......................... 176

HYDRODYNAMIC FORCES

Breaking Wave Impact Loads on Vertical Faces
N.W.H. Allsop, D. Vicinanza, M. Calabrese and L. Centurioni ........................................ 185

Wave Slamming on Offshore Structure
Yongxue Wang .................................................................................................................. 192

Wave Forces on Vertical Circular Cylinder Under Two-Crossing Wave Field
Yoon-Koo Kang, Takashi Tomita, Katsuhiko Kurata and Koichiro Iwata ......................... 197

Hydrodynamic Forces on Vertical Cylinders in Directional Seas: Third Order of Approximation
L. Rebaudengo Landò, G. Scarci, R. Bracco and R. Gentile ........................................ 205

A Model for Weak Impacting Force on Vertical Truncated Cylinder Due to Steep Asymmetric Wave
C.H. Kim, Y. Xu, J. Zou and Y.S. Won ............................................................................. 215

A Complete Three-Dimensional Nonlinear Hydrodynamic Analysis of a Vertical and Flexible Offshore Cylinder During Earthquakes
Bang-Fuh Chen .............................................................................................................. 221

An Experimental and Numerical Investigation of Wave Loads on Floating Bridges, Including Non-Linear and Wind Effects
Samuel Welch, Yitao Yao, Marshall Tulin and Sridhar Jagannathan .................................. 228

Vortex Method Applied to Force Calculation on Cylinder Array
S.B.C. Martins and S.H. Sphaier ..................................................................................... 237

Added Mass and Damping of Circular Moonpools
D.P.K. Fung ....................................................................................................................... 247

Convergence of Numerical Estimates of Hydrodynamic Coefficients
Michael Isaacson and Thomas Mathai ............................................................................ 255

Minimum Resistance Hull Form of Planing Craft with Controlled Trim Angle
T. Nagai and Y. Yoshida .................................................................................................. 263

On the Irregular Frequencies Appearing in Wave Diffraction-Radiation Solutions
S. Malenica and X.B. Chen ............................................................................................... 271
A Study of Wave-Iceberg Load Combination Factors
Ricardo Foschi and Michael Isaacson ................................................................. 278

Wave and Current Induced Hydrodynamic Forces on Horizontal Circular Cylinders
Y. Yuksel and T. Okuyan Bostan ........................................................................ 286

Nonlinear Wave Interaction with Cylinder Arrays
K.-H. Wang and X. Ren .................................................................................. 291

The Statistical Investigations of Ocean Wave and Current Data Acting on Cesme Peninsula in the Aegean Sea (Izmir/Turkey)
Nihat Taspinar, Aydin Saatci and Davut Ozdaglar ........................................... 299

DYNAMIC RESPONSES

Application of Galerkin's Method in Wave Response Analysis of Flexible Floating Plates
Chong Wu, Tomoaki Utsunomiya and Eiichi Watanabe .................................. 307

Hydrodynamic Interaction Between a Fixed and a Floating Cylinder
Imam H. Kazi, Allen T. Chwang and George T. Yates ...................................... 315

A Model for the Propagation of Waves Through the MIZ from a Single Floe Solution
Michael H. Meylan and Colin Fox .................................................................. 321

The Wave Response of Floating Thin Plates of Shallow Draft by a Variational Method
Michael H. Meylan ....................................................................................... 328

Loads and Motions for Underway Floating Structure in Waves
Yanying Wang and Jie Miao ........................................................................... 335

Experimental Modal Analysis by Harmonic Sweep Excitation on Unit Linked Floating Models
Ryuji Endo, Takuji Hamamoto, Takehiko Kato, Kenji Wakui, Takuji Imai and Nobuyoshi Tosaka ....... 341

Motion Simulation of a Floating Structure Coupled with Mooring Lines
Sa Y. Hong and Sup Hong ............................................................................ 349

Motion Response of a Moored Semi-Submersible Platform in Waves
Xiaohong Chen and Xianglu Huang ................................................................. 356

Motions of Floating Pier for Marina in Waves
Katsuhiko Saito and Masayoshi Kubo .............................................................. 364

Motion Transfer Functions for a Slack-Moored Wave-Following Buoy

CONTENTS

VOLUME IV, 1996

PLENARY PRESENTATIONS

Computational Welding Mechanics  
Yukio Ueda and Hidekazu Murakawa .......................................................... 1

ISO Harmonization of Offshore Guidance on Strength of Tubular Joints  
N. Zettlemoyer ................................................................................ 9

TUBULAR STRUCTURES

The Basis for Changing the Fatigue Provisions of API RP2A  
William C. Mohr ........................................................................................ 15

Bird Beak T-Joints in Square Hollow Sections: A Finite Element Investigation  
G. Davies, J.S. Owen and R. Kelly ........................................................... 22

Effect of Applied Shear/Moment Ratio on In-Plane Moment Strength of X-Joint  
Y.S. Choo, K.H. Lee and F.K. Lau .......................................................... 28

Flexibility Coefficients for Innovative Tubular Connections  
A. Ure, P. Grundy and I. Eadie ................................................................. 34

Probabilistic Maintenance Planning for the Tubular Joints in the Steel Gates in the Eastern Scheldt Storm Surge Barrier  
O.D. Dijkstra, S.E. van Manen, F.B.J. Gijsbers and H. van der Weijde ................. 39

Stress Concentrations in Tubular Joints Welded from One Side  
Morten Baerheim ..................................................................................... 47

Determination of Stress Concentration Factors for K-Connections Between Square Hollow Sections  
A.M. van Wingerde, J.A. Packer and J. Wardenier ........................................ 52
Comparison of Uniplanar and Multiplanar K-Joints with Gap Made of Rectangular Hollow Sections
S. Herion and F. Mang .......................................................... 60

Parametric Study on Multiplanar K-Joints with Gap Made of Circular Hollow Sections by Means of the Finite Element Method
S. Herion, F. Mang and R. Puthli .................................................. 68

Strain Concentration Factors and Load Capacity of Innovative Tubular Joints
A. Ure, P. Grundy and I. Eadie .................................................... 74

A Comparative Study on the Fatigue Crack Growth Behavior of Welded Joints Under Random Fatigue Loading
Y.C. Wu, J.C. Chen and X.X. Cheng ........................................... 78

Fatigue Life Estimation of Tubular Joint of Offshore Fixed Platform Under Ice Loads
Fayan Xu and Huacan Fang ...................................................... 86

Experimental and Finite Element Studies to Determine the Stress-Strain Characteristics for Cold- and Hot-Formed SHS Relevant for the Rotation Behaviour of Beams
N. Stranghóner, G. Sedlacek and W. Dahl ........................................ 90

The Static Behaviour of Multiplanar Tubular XX-Joints Loaded by In-Plane Bending Moments on the In-Plane and Axial Forces on the Out-of-Plane Braces
G.J. van der Vegte and J. Wardenier ........................................... 94

Modelling of the Rotation Capacity of Cold- and Hot-Formed SHS Beams by a Plastic Collapse Mechanism
N. Stranghóner and G. Sedlacek .................................................. 101

Parameter Study on the Static Strength of Multiplanar XX-Joints in Rectangular Hollow Sections Loaded by In-Plane Bending Moments
Y. Yu and J. Wardenier .......................................................... 105

Load Interaction on the Ultimate Strength of Tubular T-Joints
J.D. Kim, C.W. Rim, B.C. Shin and C.H. Hong .......................... 113

The Influence of the Can Length on the Static Strength of Multiplanar XX-Joints
G.J. van der Vegte and J. Wardenier .......................................... 120

WELDING AND ROBOTICS

Detection and Tracking of Weld Line by a Welding Robot with Ultrasonic Sensing System in Underwater Wet Welding
Y. Suga and A. Machida .......................................................... 128

Influence of Chemical Composition, Heat Treatment, Plastic Deformation and Surface Heating on Mechanical Properties of High Strength Steels for Offshore Technology and Shipbuilding
Henryk Buglacki ................................................................. 133
Technology of Welding High Strength Low Alloy Quenched and Tempered Steel Plates for
Offshore Technology and Shipbuilding
Henryk Buglacki

Properties of a Ferritic Metal Cored Wire Weld Metal Deposited in the Pressure Range from 51bar to 110bar
J.F. dos Santos, V.R. dos Santos and J.C. Jorge

The Influence of the Water Contact on the Welding Residual Stresses of Wet Underwater Welds
L. Lindhorst, O. Mahrenholtz and J. Bartzsch

Fracture Toughness Assessment and HAZ Strain-Ageing Resistance of Thermomechanically Processed Steel Subjected to Cold Forming Before Welding
P. Nevasmaa, O. Kortelainen, K. Wallin and D. Porter

Kinematics and Thermoplastic Analysis of Ship Hull Plate Forming
Jong-Gye Shin, Won-Don Kim and Jang-Hyun Lee

Oxygen and Nitrogen in SMAW and GMAW Processes
T. Wegrzyn

Design of an Eye-in-Hand Robotic Vision System
J. Jardim and S.C. Absi-Alfaro

Off-Line Programming of Flexible Welding Manufacturing Cells

Sae-Kyoo Oh, Jung-Hwan Oh and Hong-Keun Chang

Penetration Control by Detecting Oscillation of Weld Pool in Automatic TIG Arc Welding
Y. Suga and T. Tokiwa

FATIGUE, FRACTURE AND CORROSION

Fatigue of TLP Tendon Girth Welds
G.R. Razmjoo, I. Hadley and S. Crouch

Study on Fatigue Strength of Boxing Fillet Weldments (2nd Report)
Yasumitsu Tomita, Kiyoshi Hashimoto, Kuniteru Ishikawa, Hiroshi Yamamoto and Tetsuji Fukuoka

Fatigue of Cracked Ship Critical Structural Details: Cracked S-N Curves and Load Shedding
T. Xu and R.G. Bea

Effect of Specimen Thickness on Probabilistic Fatigue Crack Growth
Seon-Jin Kim, Sae-Kyoo Oh, Hiroshi Itagaki and Tetsuo Ishizuka

Structural Monitoring for Fatigue Crack Detection and Prediction
Y. Fujimoto, E. Shintaku and S.C. Kim: Hydrogen Induced Cracking and Embrittlement in Zeron 100
P.J. Fang and D. Kirkwood: On the Proper Correction of Design Fatigue Curves in Fatigue Assessment of Ship Hull Structures
S.V. Petinov and T.I. Letova: Fatigue Crack Initiation and Propagation: An Inelastic Strain Energy Approach
S. Petinov: Fracture Mechanics Evaluation of Ductile Vessel Rupture Under LNG-Conditions
H. Yajima, Y. Huang, M. Yamamoto, M. Tada and H. Kitada: The Low Temperature Fracture Behaviour of a Super-Duplex Stainless Steel (Zeron 100)
Sae-Kyoo Oh, Seon-Jin Kim and Tae-Eun Jeon: COMPOSITE MATERIALS
Yuichi Kawagishi, Yukio Hirose and Toshihiko Sasaki: Measurement of Stress Intensity Factor Under Mixed-Mode Loading by the Method of Caustics
Flynn L. Auchey and Piyush K. Dutta: The Use of Recycled High Density Polyethylene Fibers as Secondary Reinforcement in Concrete Subjected to Severe Environment
R.H. Knapp and T.T. Le: Polyhedrally-Stiffened Composite Pressure Hulls
Yu-pu Song and Guo-fan Zhao: Failure Criterion of the Mass Concrete Under Combined Compression-Tension Stress States
Abhijit Mukherjee: Optimization of the Shape of a Hole in Laminated Composite Materials
Numerical Study of Stability of Laminated Composite Shells Using a Finite Volume Technique
T. Capponi, G. Labonia and M. Marchetti ................................................................................................................................. 312

**Effects of Delaminations on Composite Tubes Subjected to External Pressure**
Hayder A. Rasheed and John L. Tassoulas ............................................................................................................................... 320

**Transverse Fatigue Crack Growth of Graphite/Epoxy Composites in High Pressure Seawater**
S.T. Mear, J. Stolk, H.G. Wheat and H.L. Marcus ...................................................................................................................... 327

**Hybrid Composite Design: Optimization and Scaling Aspects**
Ozden O. Ochoa ......................................................................................................................................................................... 333

**Retrofitting and Structural Repair with Advanced Polymer Matrix Composite Materials**
M. Arockiasamy and P.K. Dutta .............................................................................................................................................. 336

**MECHANICS AND EXPERIMENTS**

**Estimating Method of Buckling Strength of Rectangular Plates Using Selected Eigenfunction**
Koji Masaoka, Hiroo Okada and Yukio Ueda .......................................................................................................................... 341

**An Accelerated Solution Algorithm for the Eigenvalue Problem in the Offshore Structural Analysis**
H. Karadeniz ............................................................................................................................................................................... 347

**Effect of Dishing on In-Plane Stiffness of Stiffened Plates**
A. Geiro and P. Grundy ............................................................................................................................................................... 352

**Application of Combined Theory of Strength and Stability to Fracture Mechanics**
Peilin Luo, Kanglin Liu and Hongwu Luo ................................................................................................................................. 356

**Advantages and Limitations of Using CFD for Gas Dispersion in Offshore Structures**

**RELIABILITY AND SAFETY**

**Stochastic Dynamics of Offshore Structures with Non-Gaussian Wave Excitation**
Jin Wang and Loren D. Lutes ...................................................................................................................................................... 369

**An Analytical Algorithm for Predicting Reliability Confidence Bounds and Applications to Ship Structures**
Q. Liu .......................................................................................................................................................................................... 376

**Uncertainty and Sensitivity Analysis of Reliability for Marine Structures**
Defu Liu, Sheng Dong and Chao Wang .................................................................................................................................. 380

**Structural Reliability Analysis Using Commercial FEM Package**
Y.S. Yang, J.O. Lee and B.J. Kim ......................................................................................................................................... 387

**Computer Investigation of Construction Reliability**

34
Calibration of Models for Slow Drift Motions Using Statistical Moments of Observed Data
Todd C. Ude and Steven R. Winterstein ........................................................................................................ 402

Reliability Assessment of Overload Failure of the Heidrun Tethers
Sverre Haver ................................................................................................................................................. 410

Fatigue Reliability and Life Cycle Cost Analysis of Mooring Chains
T. Lassen and K. Syvertsen .................................................................................................................................. 418

Reliability of Stiffened-Plated Panels in Offshore Structures
K.T. Ma and I.R. Orisamolu .................................................................................................................................. 423

Reassessment of Fixed Offshore Structures Using Reliability and Nonlinear Analyses
L.V.S. Sagrilo, E.C.P. Lima and S.G.H. Rodríguez ........................................................................................................ 431

A Simplified Structural Reliability Analysis Procedure for Use in Assessments and
Requalifications of Template-Type Offshore Platforms
M. Mortazavi and R.G. Bea ...................................................................................................................................... 438

The Setting of Target Safety Levels for the Assessment of Offshore Structures
M. Birkinshaw and D. Smith ........................................................................................................................................ 447

Reliability-Based Mooring System Design for a Drilling Semisubmersible
Kjell Larsen and Jan Mathisen .................................................................................................................................. 457

Simulation Model for Development of Siting Strategies for Mobile Offshore Drilling Units
J. Ying and R.G. Bea .............................................................................................................................................. 467

COLLISION AND DAMAGE

Grounding Bottom Damage and Ship Motion Over a Rock
Bo Cerup Simonsen and Tomasz Wierzbicki ............................................................................................................. 476

Large Scale Tanker Grounding Experiments
James L. Rodd .................................................................................................................................................. 483

On the Dissipation Energy and Crushing Strength of Stiffened Plates Under
Axial Compression
J.M. Choung and J.W. Lee ........................................................................................................................................ 495

Energy Absorption Capacity of Steel Plates Under Lateral Loading
A. Glykas, E. Samuelides and P.K. Das ....................................................................................................................... 502

A Semi-Analytical Method of Assessing the Residual Longitudinal Strength of
Damaged Ship Hull
Sheng-Kun Zhang, Qing Yu and Yang Mu ............................................................................................................... 510

Grounding-Induced Sectional Forces and Residual Strength of Grounded Ship Hulls
Collision Simulation of a Double-Hulled Structure with Uni-Directional Girder System
Masaru Mizukami, Masayuki Tanigawa, Shin-ichi Nagahama and Sakito Kamei
523

NAVAL & MARINE SYSTEMS

Systematic Design of an Extensible Membrane for LNG Carrier Tanks
Michael French
529

Numerical Simulation of Transient Flows Induced by a Berthing Ship
Miaomou Chen, Hamm-Ching Chen and D.A. Davis
533

Development of a Crane System for High Speed Transportation in Container Terminal
Sang-Bong Kim, Sun-Min Kim, Min-Saeng Shin and Jong-Sik Lee
542

Development of a Rapidly Deployed Pier (RDP)
Michele Murdoch and Glenwood Bretz
548

An Open Sea Modular Construction Method: Rigid Pontoon Connectors
Erick T. Huang
553

Recording and Tracking Technologies: Opening a Window to Total Asset Visibility
Robert F. Paguio
559

ADDITIONAL PAPERS

Reliability Based Inspection Planning Applications for Offshore Structures
Toula Onoufriou
565

The Effect of Residual Stresses and Micro Strain on SCC Resistance of Al-Zn-Mg-Cu System Alloys
Hideaki Matsuoka and Yukio Hirose
573

A Mechanism for a Potentially Dangerous Transfer of Energy in Multi-Degree-of-Freedom Dynamic Systems such as TLPs
577

Analytical Study on Settlement Behavior of Soft Ground Improved by SCP
Tamotsu Matsui, Kazuhiro Oda and Yasuyuki Nabeshima
582
