The Proceedings of The Seventh (1997) International OFFSHORE AND POLAR ENGINEERING CONFERENCE

Honolulu, Hawaii, USA, May 25-30, 1997

VOLUMES I, II, III, IV, 1997

Copyright © 1997 by International Society of Offshore and Polar Engineers, Golden, Colorado, USA. All Rights Reserved. www.isope.org; meetings@isope.org

For set of 4 volumes; 3,556 pp.

Library of Congress Catalog Card Number: 97-70292

Indexed by Engineering Index, Compendex and Others www.isope.org: orders@isope.org

International Society of Offshore and Polar Engineers (ISOPE) P.O. Box 189, Cupertino, California 95015–0189 USA

International Society of Offshore and Polar Engineers
presented at:

organized by:
  International Society of Offshore and Polar Engineers

sponsored by:
  International Society of Offshore and Polar Engineers (ISOPE)
  with cooperating societies and associations

CONTENTS

PLENARY PRESENTATIONS

Environmental Protection of the Deep Sea: A Challenge for Engineers, Scientists and Politicians
  Hjalmar Thiel ........................................................................................................................................... 1

The Tokyo Bay Tunnel of the Trans-Tokyo Bay Highway
  T. Funasaki, Y. Izumi, T. Masuda and M. Kanai ................................................................................... 6

Lessons to Learn from Full Scale Measurements of Snorre TLP Tethers
  Arnljot Skogvang and Horst Vogel ..................................................................................................... 16

OCEAN AND TECHNOLOGY REVIEW

Norway's Remaining Petroleum Resources: Perspectives and Challenges
  Finn Roar Aamodt ............................................................................................................................... 25

Emergency Management for Coastal Earthquake Disaster from the Viewpoint of the Sea
  Ichiro Tanaka ...................................................................................................................................... 29

SAKHALIN OIL AND GAS

Neftegorsk Earthquake, 28 May 1995, Sakhalin Island
  V.V. Kharakhinov, S.G. Litvinov and S.P. Beketsy ........................................................................... 35
Aspects of the Environmental Safety in the Processes of the Development of Oil/Gas Fields Offshore Sakhalin
T.V. Gnezdova and A.N. Kravchenko................................................................. 38

The Role of Oil and Gas Projects of Sakhalin Shelf in Supplement of Far-Eastern Region of Russia with Fuel-Energy Resources
L.S. Brodski, I.Ph. Vasyanovich and E.K. Terpugov .................................................. 42

Oil and Gas Exploration on the North Sakhalin and Its Shelf
V.M. Zakalsky, V.S. Kovalchuk, A.V. Kuchin and Yu. S. Mavrinsky.............................. 46

Petroleum Possibilities of the Far Eastern Seas
E.G. Koblov, Yu.S. Mavrinsky and V.V. Kharakhinov.................................................. 50

Production and Domestic Distribution of Sakhalin Offshore Natural Gas
S.M. Bogdanchikov and V.N. Astafiev ........................................................................... 62

Parameters of Ice Ridges of the Okhotsk Sea
G.A. Surkov.................................................................................................................. 68

RESOURCES AND ENERGY

Utilisation of CFD to Study an Oscillating Water Column
P. White, M. Webster, A. Thakker and M. O'Dowd .......................................................... 70

Air Turbine with Cambered Blades for Wave Energy Conversion: Performances in Steady Flow Condition
Kenji Kaneko, Manabu Takao and Toshiaki Setoguchi .................................................... 77

Effect of Guide Vanes on the Performance of a Wells Turbine for Wave Energy Conversion
T. Setoguchi, M. Takao, K. Kaneko and M. Inoue ............................................................. 83

Some Considerations to Ocean Wave Power Converter
Tomiji Watabe................................................................................................................ 89

Gas Hydrates in the Messoyakha Gas Field of the West Siberian Basin - A Re-Examination of the Geologic Evidence
Timothy S. Collett and Gabriel D. Ginsburg .................................................................. 96

Estimated Gas Hydrate Volumes: Example from the Niger Delta Front
Martin Hovland, Ben Clennell, Joseph W. Gallagher and Knut Lekvam ................................ 104

A Study and Hypothesis of Hydrate Growth Using a Low Dosage Hydrate Inhibitor (During a Shut-In Period in a Multiphase Pipeline)
Are Lund, Olav Urdahl, Olav Lier, Lars Henrik Gjertsen, Thorvald Jakobsen and John Andreas Støvneng................................................................. 110

Sea Bottom Radioactivity Measurement Systems in Japan
Mutsuo Hattori, Yoshii Kobayashi and Masaharu Okano................................................ 116
A New Broad Band Frequency Modulated Subbottom Profiler Developed for Hawaii
James Barry, Steven G. Schock and Marc Ericksen ................................................................. 120

Longitudinal Vibration-Control of Pipe String for Mining Manganese Nodules in Deep Sea with an Elastic Support
Yoshikazu Kobayashi and Kazuo Aso ........................................................................................... 128

To the Problem of Application of Ecologically Good Methods of Building and Titanium-Magnetite Sands Mining in the Shelf
Y.N. Niskovskiy, E.V. Niskovskaya and A.M. Vasinovitch ........................................................................... 136

The Project of Marine Dressing Complex for Mining the Deposits of the Far Eastern and North-Eastern Seas Shelf
Anatoliy V. Zhukov, Vladimir T. Lutsenko and Mikhail I. Zvonarev .................................................. 138

Mathematical Simulation of Run Operations with Cable-Container System for Deep Ocean Mining of Hard Minerals
Ivan F. Glumov, Vadim S. Tikhonov, Alexander I. Safronov, Yuri P. Semyonov and Valery E. Lyubinsky ........................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................................ Analysis of Anchor Mooring Lines in Sands
S. Bang and R.J. Taylor ............................................................................................................................ 797

Piles and Shallow Foundations Under Cyclic Loadings
Jan Laue, Thomas Grundhoff and Hans L. Jessberger ........................................................................ 803

Cyclic Load-Induced Settlement of Shallow Foundations on Geogrid-Reinforced Layered Soil
Braja M. Das and K.H. Khing .................................................................................................................. 811

Dynamic Response of Square Foundation Vibration Using 3D Boundary Element Method
Sheng-Huoo Ni and Pay-Shiun Tsai ......................................................................................................... 815

The Study on the Electro Osmotic Consolidation of Marine Clayey Soil
Soo-Sam Kim, Kwang-Yeol Lee, Sang-Jae Han and Kyung-Hwan Koh .................................................... 821

Consolidation Analysis of Natural Clay by Flow Surface History Variable Model
Nobuharu Abe ........................................................................................................................................... 827

Bed Shear Stress Distribution Over a Composite Beach Profile
E. Özkan Çevik and Y. Yüksel .................................................................................................................. 832
Model Prediction of Stress-Strain Behavior on Cohesionless Soil
Robert Yun-Pin Chin ....................................................................................................................... 835

Effect of Pre-Shearing with Drainage on Undrained Cyclic Shear Behaviour of Dense Sand
Ken-ichi Sato, Kazuya Yasuhara and Nobuo Yoshida .................................................................... 842

Effects of Compression Rate on Unconfined Compressive Strength of Cohesive Soils: Evaluation
Based on the Effective Stress
Masayoshi Shimizu .................................................................................................................................. 850

Estimation of In-situ Consolidation Parameters and Prediction of Settlement Behavior of Embankment
Takaharu Shogaki, Yoshikazu Maruyama and Keiji Kogure ................................................................. 855

Dynamic Response of Caisson with Suction and Its Foundation Due to Wave
Tomiya Takatani, Yoshi-hiko Maeno, Shigeo Takahashi and Ken-ichiro Shimosako ......................... 861

Discontinuous Deformation Analysis on Seafloor Sliding Simulation
L.K. Chien and Y.N. Oh .......................................................................................................................... 868

Improved Data Interpretation Method for SASW Tests at Complex Geotechnical Sites
Sung-Ho Joh, Brent L. Rosenblad and Kenneth H. Stokoe, II ................................................................ 875

Consolidation Characteristics of Pleistocene Clays Under Wide Range of Applied Pressures
Tamotsu Matsui, Kazuhiro Oda, Yasuyuki Nabhshima and Kwang Hoon Yang ................................. 882

Seepage Through an Embankment Computed by Grid Research Using FEM
Mahmudul Alam Chowdhury, Masato Kunitake and Fumiyoshi Kondo ................................................ 887

Shear Behavior of Remolded Clay in Strain Path Controlled Mini-Triaxial Test
Tamotsu Matsui, Kazuhiro Oda and Yasuyuki Nabhshima ................................................................. 894

Drained and Undrained Behavior of Sand Under Cyclic Loading
T. Nakai, T. Hoshikawa and M. Hinokio .............................................................................................. 901

Effect of Sample Disturbance on Consolidation Yield Stress of Ariake Clays
Zhenshun Hong and Katsutada Onitsuka ....................................................................................... 907

A Small Diameter Sampler and the Quality of Its Samples
Takaharu Shogaki and Takashi Sudoh ............................................................................................... 915

Stability of Heaps of Iron Ore Concentrate
Jan Laue .................................................................................................................................................. 921

A Feasibility Study of the Utilization of De-sulphurization Slag as Engineering Filling Materials
Der-Her Lee, Juu-En Chang and Yuin-Yao Jhi ................................................................................... 928

Effect of Internal Structure on Mechanical Behavior of Osaka Pleistocene Marine Clay
A. Yashima, F. Oka and H. Shigematsu ............................................................................................ 933

A Novel Procedure for Testing Model Drag Anchors
M.P. O’Neill, M.F. Randolph and S.R. Neubecker ............................................................................. 939
Geotechnical Properties of Crude Oil-Contaminated Sand
E.C. Shin, J.B. Lee and B.M. Das ................................................................. 946

Stabilization of Petroleum Contaminated Drilling Wastes by Additives
M. Tuncan, A. Tuncan and H. Koyuncu .......................................................... 950

GIS Database of Irrigation Ponds Damaged by the 1995 Hyokoken-Nambu Earthquake
Kazunori Uchida ............................................................................................. 954

ADDITIONAL PAPERS

On the Role of Geologic Factors in Determining Peculiarities of Water Mass Structure in the Clarion-Clipperton Ore Field
G. Tkatchenko, R. Kotlinski, V. Stoyanova, Dehua Lian, Guozhen Zhang and Yongyang Huang .......... 959

Performance of a Wells Type Turbine Coupled to an Induction Generator for Wave Energy Applications
Ardhendu G. Pathak, V. Jayashankar and M. Ravindran ........................................ 962

A Study of Sedimentation Processes in Seamangeum Coastal Area
Moon Seup Shin, Tetsuo Yanagi and Sung Kun Hong ....................................... 966

Floating Wave-Energy Pump for Wide Wave-Range
H. Ueki, K. Kawaguty and S. Akamine ............................................................. 973
Alexander T. Bekker, Far Eastern State Technical University, Vladivostok, Russia

presented at:

organized by:
International Society of Offshore and Polar Engineers

sponsored by:
International Society of Offshore and Polar Engineers (ISOPE)
with cooperating societies and associations

UNDERWATER VEHICLE SYSTEMS

Experimental Study of the Dynamic Behaviour of a Towed System
G. Duvat and C. Large.............................................................................................................................................. 17

Advanced Tethered/Non-Tethered Control System for a Large Underwater Vehicle
Xiaocheng Shi and Xinqian Bian .............................................................................................................................. 26

A Study on Hydrodynamic Characteristics of a Towed Vehicle
Satoru Yamaguchi, Wataru Koterayama and Eiji Sasaki ..................................................................................... 30

Coupled Motion Simulation of Underwater Towed and Self-Propulsive Vehicle
Ke-Qiang Zhu and Wei-Yang Li............................................................................................................................ 38
3-D Simulation of a Two-Part Underwater Towed System
Jiaming Wu and Allen T. Chwang ................................................................. 44

LMI-Based Design of Robust Controllers for an Underwater Vehicle
Hiroyuki Kajiwara, Wataru Koterayama, Masahiko Nakamura and Shigeru Yugawa .............................................. 51

The Problem of Synthesis of the Most Effective System for Supporting a Heat Balance in a
Diving Chamber of the Hyperbaric Lifeboats
O.A. Kozyrko, Y.V. Zacharov, E.I. Trushlyakov and P.A. Chegrintsev ................................................................. 57

Bifurcation and Normal Forms of Dive Plane Reversal of Submersible Vehicles
Wei Kang and Fotis A. Papoulias .................................................................................. 62

New Experimental Results on Shallow-Water Autonomous Underwater Vehicle Motion in
Controlled Environments
P.E. An, S.M. Smith, S.E. Dunn, X. Chen and L. Mu ................................................................. 69

Exploring the Possibility of Placing Traditional Marine Vessels Under Oscillating
Foil Propulsion
J. Czarnowski, R. Cleary and B. Kreamer .................................................................................. 76

Concept Design of a Flexible-Hull Unmanned Undersea Vehicle
Jamie M. Anderson, Michael S. Triantafyllou and Peter A. Kerrebrock ................................................................. 82

AUV Platform Requirements for Ambient Turbulence Measurement
Manhar R. Dhanak and Ken Holappa .................................................................................. 89

A Hybrid Navigation System for Underwater Robotic Vehicles
Pan-Mook Lee, Chong-Moo Lee, Seong-Wook Cheong, Jae-Seok Oh and Jun-Ho Oh ............................................. 93

Sensor Data Fusion in Marine Robotics
John J. Leonard and Christopher M. Smith .................................................................................. 100

MECHANICS OF RISERS, ABLES AND MOORING

Reentry of Deepsea Riser by Adaptive Control
Dongho Nam, Hideyuki Suzuki and Koichiro Yoshida ................................................................. 107

Application of Thrusts to Elastic Joints of Long Vertical Pipe in 3-D Nonlinear Motions: Part I.
MSE and FEM Modeling
Jin S. Chung, Baorong Cheng and Zhao-Chang Zheng .................................................................................. 115

Dynamics of Deep Water Marine Risers - Asymptotic Solutions
Geir Moe and Bjørn Larsen ......................................................................................... 123

Effect of Axial Deformation on Natural Frequencies of Marine Cables
Somchai Chucheepsakul and Tseng Huang .................................................................................. 131

Structural Analysis of Flexible Pipe Using Finite Element Method
Flavio Torres Lopez da Cruz and Carlos Alberto Nunes Dias ................................................................. 137
Fatigue Performance of Deep Water Rigid Marine Risers
G.F.M. de Souza and E. Gonçalves ................................................................. 144

Dynamical Measurements of the Bending Stiffness of Taut Cables
Peter Hagedorn and Ulrich Gutzer .............................................................. 152

Analysis of Resonant Tangential Response in Submerged Cables Resulting from 1-to-1 Internal Resonance
B.L. Newberry and N.C. Perkins ................................................................. 157

Installation Options for Deployment of Light-Weight Telecommunications Cable
James J. Burgess ....................................................................................... 164

Axial Fatigue of Spiral Strands in Offshore Platform Applications
M. Raoof and M. Alani ............................................................................ 169

Transition in the Wake of Flexible Cables and Beams
C. Evangelinos and G.E. Karniadakis ....................................................... 177

Simplified Catenary Force-Deflection Analysis
John F. Flory ............................................................................................ 185

Nonlinear Contributions in Predicting Dynamic Tensions on Mooring Lines for High and Low Frequencies of Excitation
J.K. Chatjigeorgiou and S.A. Mavrakos ................................................. 192

A Synthesis Procedure of Mooring System to Reduce Costs and Simplify the Underwater Layout
B.L.R. Andrade, M.R. Martins and H.L. Brinati ....................................... 200

OFFSHORE AND ARCTIC PIPELINES

Transport Support for Oil and Gas Production Facilities on the Sakhalin Offshore
A.M. Polomoshnov and S.V. Astafiev ....................................................... 208

A Numerical Simulation to Determine Ice Scour and Pipeline Burial Depth
Ki-Young Yoon, Kyungsik Choi and Han-Il Park ..................................... 212

Sour Resistant X65 UOE Line Pipe for Low-Temperature Service

Technological Regimes of the Natural Gas Transport by Marine Pipelines with Schtokmanovskoe Gas Condensate Field, Barentsevo Sea
N.G. Figarov, V.V. Rusakova and A.S. Tsourikov .................................... 226

An Introduction to the DNV 1996 Rules for Submarine Pipeline Systems
Leif Collberg, Tommy Bjørnsen and Kim J. Mørk .................................... 233

Stability of Pipeline in Curved Route During Offshore Pipeline Installation
H. Shin, J.B. Kim and Chul H. Jo ............................................................. 243

POLAR AND ICE ENGINEERING

JOIA Project of Study on Ice Load
Hiroshi Saeki, Ken-ichi Hiyayama, Tetsuro Kawasaki, Satoshi Akagawa, Kazuyuki Kato, Kazuhiko Kamesaki, Koji Saka and Akira Kurokawa ................................................................. 349

Distinct Element Simulation of Ice Sheet Failure Against Offshore Structures
K. Katsuragi, M. Ochi, H. Seto and T. Kawasaki ................................................................. 356

Simulation of Ice Loads on a Conical Shaped Structure: Comparison with Experimental Results
Kazuyuki Kato and Koh Izumiyama ............................................................................. 360

Medium Scale Field Indentation Tests - Physical Properties and Strength of the Ice Sheet
H. Matsushita, T. Takawaki, K. Masaki, M. Hanada, H. Honda, A. Nishihata, H. Saeki and K. Hirayama ................................................................. 368

Medium-Scale Field Indentation Tests (MSFIT) - Ice Failure Characteristics in Ice/Structure Interactions
Takahiro Takeuchi, Takaharu Masaki, Satoshi Akagawa, Munoe Kawamura, Naoki Nakazawa, Takashi Terashima, Hideki Honda, Hiroshi Saeki and Ken-ichi Hirayama ................................................................. 376

Medium-Scale Field Indentation Tests: Measurements of Ice Sheet Deformation Under Ice-Structure Interactions by Means of Photogrammetry
M. Sakai, M. Aoshima, H. Katsui and M. Suzuki ................................................................. 383

Experimental Studies on Nonsimultaneous Failure Characteristics of Vertical Sided Indentors
Kazuhiko Kamesaki, Hiroyuki Tsukuda and Yutaka Yamauchi ................................................................. 387

Thermal Stressing of Pack Ice
James K. Lewis ................................................................................................................................. 394

The Ductile Deformation of Columnar (S2) Saline Ice Under Triaxial Compression
Jeffrey S. Melton and Erland M. Schulson ............................................................................. 402

Flexural Strength of Ice with Non-Uniform Thickness
G.W. Timco and A.M. Cornett ............................................................................................................. 410

Temperature Effect on Strength of Ice Under Triaxial Compression
Anatoly M. Fish and Yuri K. Zaretsky .................................................................................. 415

Ice Floe Collisions: A Neglected Attribute of Wave Dissipation in Ice Fields
Vernon A. Squire and Hayley H. Shen .................................................................................. 423

Discrete and Lattice Models of Floating Ice Covers
Mohamed Sayed ................................................................................................................................. 428

Assessment of the Wave-Iceberg Load Combination Factor
Ricardo Foschi, Michael Isaacson, Norman Allyn and Ibrahim Saudy ................................................................. 434

Ice Boom Loads in the St. Lawrence River, 1994-95 & 1995-96
A. Cornett, R. Frederking, B. Morse and S. Dumont ............................................................................. 442
Ridge Ice Loads on Proposed Faceted Conical Structure
Zhiguo Wang, Derek B. Muggeridge and Ken. R. Croasdale ................................................................. 449

Vertical Ice Forces on Large-Diameter Marine Structures Under Water Level Changes
Takashi Terashima, Naoki Nakazawa, Akifumi Nishihata, Hideki Honda and Takaharu Kawai .......... 457

Method of Ridge Ice Force Analysis on Offshore Structures
Alexander T. Bekker, Olga A. Komarova and Sergey L. Vasiljev .......................................................... 461

Experimental Study of the Friction of Ice Over Concrete at the Centimetre Scale
B. Fiorio, J. Meyssonnier and M. Boulon ............................................................................................... 466

Abrasion of Steel Sheet Piles Due to Ice Flow Movements
Takashi Terashima, Masakuni Hanada, Takaharu Kawai, Kaori Oshima and Fumihiro Hara .............. 473

Discrete Element Modelling of the Local Interaction Between a Stationary Structure and a
Moving Ice Pack
K. Sepehr, A.P.S. Selvadurai and G. Comfort ...................................................................................... 480

Design Parameters for Hummocks and Grounded Hummocks in the Sea of Okhotsk
S.P. Beketsky, V.N. Astafiev and P.A. Truskov ...................................................................................... 487

Description of Sea Ice Regime for Offshore Construction
A.T. Bekker and I.L. Appel ......................................................................................................................... 494

A Methodology for Developing a Scientific Basis for the Ice Regime System
G.W. Timco, R.M.W. Frederking and V.M. Santos-Pedro ...................................................................... 498

Real-Time Monitoring of River Ice Floes
Brian Morse, Marc Choquette and Marc Savard .................................................................................... 504

Ice Conditions in an Anisotropic Sea Ice Dynamics Model
R.S. Pritchard ............................................................................................................................................ 508

Numerical Modeling of Ice State for Ship Operation
I. Appel .......................................................................................................................................................... 514

On the Damage of Skeg and Steering Gear of the M/V "Stepan Krasheninnikov" in the
Antarctic Ice
N. Barabanov, A. Moskalenko and E. Lapin ............................................................................................. 521

Landing and Parking Curves for the C-17 Globemaster on Sea Ice: McMurdo Station, Antarctica
Joseph L. Barthelemy ............................................................................................................................... 523

Development of a Modern Heavy-Haul Traverse for Antarctica
George L. Blaisdell, Paul W. Richmond, Fred C. Kaiser and Russell G. Alger ........................................ 529

The Polar Ice Prediction System (PIPS 2.0) - the Navy's Sea Ice Forecasting System
Pamela G. Posey and Ruth H. Preller ....................................................................................................... 537
Characteristics of Frequency Spectra of Wind Waves in the Presence of Sea Ice
Tetsuya Hayakawa, Takahiko Sasajima, Masafumi Yoshino and Chiaki Goto ........................................ 544

An Analysis of Wave Fields Around a Flexible Sheet Structure with Green Function Method
Ken-ichiro Hamanaka and Masaya Kato ................................................................................................ 551

ARCTIC POLLUTION

Arctic Shoreline Oil Combatting Experiments in 1996 in Murmansk
Jorma Rytkönen, Reetta Piskonen, Merja Itävaara, Gennady Matishov, Vladimir Petrov and
Gennady Iluyin........................................................................................................................................ 558

The Improvement of Oil Bioremediation on the Shoreline
Jorma Rytkönen, Merja Itävaara and John E. Paulsen ................................................................. 565

Pollution Abatement at McMurdo Station, Antarctica
Erick Chiang, Shih-Cheng Chang and Arthur J. Brown........................................................................ 572

On the Adhesion of Oil to Ice
Seppo Liukkonen, Jorma Rytkönen, Alexander Alhimenko and Elena Kniazeva................................. 579

In-Situ Burning: An Alternative Approach to Oil Spill Clean-Up in Arctic Waters
Chantal C. Guénette ......................................................................................................................... 587

Modelling Oil Pollution Under Ice Cover
A. Alhimenko, A. Bolshev, A. Yakovlev, K. Klevanny and S. Liukkonen............................................ 594

Study of Polluted Air Masses Coming Ways into Arctics
A.M. Prokhorenkov and A.S. Sovlukov ............................................................................................... 602

Source Locations of Contaminated Sea Ice Derived Using Backward Trajectories from an Ice-
Ocean Model
Ruth H. Preller and Pamela G. Posey ................................................................................................. 608

Intelligent Sensor Protection System for Polar and Marine Environments
Peter J. Stein, Armen Bahlavouni and Douglas W. Andersen ............................................................ 615

Application of the Pivot Point on FCP Diagram to Low-Temperature Fatigue of Materials
Meng-Lan Duan, James C.M. Li and Jing Li ....................................................................................... 621

ATMOSPHERIC ICING

A Laboratory Simulation of Wet Icing Build-up on H.V. Insulators
M. Farzaneh and J.-L. Laforte .............................................................................................................. 626

A Theoretical Investigation of the Distribution of Freshwater Spongy Spray on a
Vertical Cylinder
R.Z. Blackmore and E.P. Lozowski ...................................................................................................... 633
Atmospheric Icing on Cables of Different Flexibilities
Pierre McComber, Jacques Druez and Jean Laflamme ................................................................. 640

Ice Accretion and Shedding on Overhead Line Cables
Jacques Druez and Pierre McComber .......................................................................................... 647

ADDITIONAL PAPERS

Dynamic Curvature in Catenary Risers at the Touch Down Point: An Experimental Study and the Analytical Boundary-Layer Solution

A Simplified Analysis of Imperfect Thermally Buckled Subsea Pipelines
James G.A. Croll ..................................................................................................................... 666

Development of a Russian Standard for Submarine Pipeline Design, Installation and Operation
M.A. Kamyshev and J.G. de Vries .............................................................................................. 677

Limit Force Ice Loads and Their Significance to Offshore Structures in the Beaufort Sea
G. Comfort, S. Singh and A. Dinovitzer ................................................................................... 686

Wave-Induced Behaviour of a Submarine Pipeline Laid on an Erodable Bottom: Full-Scale Experiments
W. Dursthoff, W. Magda, T. Marcinkowski and B. Mazurkiewicz .................................................. 693
The Proceedings of
The Seventh (1997) International
OFFSHORE AND POLAR ENGINEERING
CONFERENCE

Honolulu, Hawaii, USA, May 25-30, 1997

VOLUME III, 1997

How to Use This Table of Contents

Scroll down or use the bookmarks in the left-side frame to move to a new location in this index. Click on a blue paper title you like to view. To return to this index after viewing a paper, click on PREVIOUS MENU bookmark in the left-side frame.

This CD-ROM is created from the PDF files. The hard-copy originals in the proceeedings are scanned and saved as PDF files. View quality of the text and graphics, the searchability and the ease of readability depend largely on the quality and/or consistency of the originals.

CONTENTS

PLENARY PRESENTATIONS

On the Contribution of Swell to Sea Surface Phenomena
Hisashi Mitsuyasu................................................................................................................................. 1

On the Dynamics and Control of Fluid-Structure Interaction Instabilities
V.J. Modi, M.L. Seto and S.R. Munshi ................................................................................................. 8

AIRGAP AND METOCEAN

Wave-in-Deck Forces
Timothy D. Finnigan and Chuck Petrauskas ......................................................................................... 19

Assessment of Mean Water Levels and Tides from Satellite Data
C. Le Provost, F. Rabilloud and M. Olagnon......................................................................................... 25

Contribution of Satellite Data to Storm-Surge Climatology
Hafedh Hajji and Michel Olagnon....................................................................................................... 32
SUCCESS: A Joint Project to Use Novel Techniques to Teach Future Engineers About Satellite Metocean Data Sources
Michel Olagnon and Georg Lindgren ................................................................. 38

Satellite Measurements and Their Application to the Pechora Sea
Hafedh Hajji and Richard A. Sproson ................................................................. 42

HYDRODYNAMICS: Waves

Runup on a Structure Due to Waves and Current
Bjarne Büchmann, Jesper Skourup and Kwok Fai Cheung ........................................ 48

A Rational Approach to Free Surface Flow by Using Higher-Order Boundary Elements
Hong G. Sung, Sa Y. Hong and Hang S. Choi ....................................................... 56

Open Boundary for Horizontally 2-D Wave Analysis with Boundary Element Method
Ken-ichiro Hamanaka and Yukio Sato .............................................................. 63

A Study on Parametric Roll Motions by Fully Nonlinear Numerical Wave Tank
Katsuji Tanizawa and Shigeru Naito ................................................................. 69

Nonlinear Irregular Waves and Forces on Truncated Vertical Cylinder in a Numerical Wave Tank
S.Y. Boo and C.H. Kim ....................................................................................... 76

Wave Generation and Active Absorption in a Numerical Wave Flume
Jesper Skourup and Hemming A. Schäffer ......................................................... 85

Numerical Simulation of Short Wave-Wave Interaction
A. Clément and L. Gil ....................................................................................... 92

Development of a Viscous Numerical Wave Tank and Numerical Evaluation of Dynamic Loads on Submerged Bodies at Small KC Numbers
V. Armenio and M. Favretto ............................................................................. 98

Wave-Current-Body Interaction by a Time-Domain High-Order Boundary Element Method
D.J. Kim and M.H. Kim .................................................................................... 107

Numerical Simulation for the Wave Resistance of a Submerged Spheroid
Chung-Chyi Lee and Ming-Chung Fang ............................................................ 116

Non-linear Internal Wave Kinematics
Alastair J. Martin and William J. Easson ......................................................... 122

Nonlinear Models of Internal Tide and Internal Solitary Wave Evolution Over a Continental Slope
Peter E. Holloway, Efim Pelinovsky, Tatyana Talipova and Belinda Barnes .............. 130

Temporal Behaviour of a Mixed Layer in a Stratified Flow
Internal Tide Driving of Estuarine-Shelf Water Exchange
Tateki Fujiwara, Tetsuya Takahashi and Katsuyuki Abo ................................................................. 144

A Flow Field Over Upwelling Producing Structure in an Oscillatory Flow with or without Stratification
G. Tsujimoto, K. Michioku and H. Nishide .................................................................................... 149

Shallow Water Equilibrium Range Waves
R.-Q. Lin and W. Perrie .................................................................................................................. 156

On Some Characteristics of Breaking Waves Generated by a Submerged Circular Cylinder
Beom-Soo Hyun and Yong Heon Shin .......................................................................................... 162

Analysis of Near-Crest Pressure Gradient of Irregular Water Waves as a Dynamic Criterion of Breaking
K. Nadaoka, O. Ono and H. Kurihara ............................................................................................. 170

Shallow-Water Nonlinear Wave Instabilities and Energy Transfer
Ming-Yang Su ..................................................................................................................................... 175

Experimental Studies on Energy Dissipation in Breaking Waves
Jun Zhang, Eustorgio Meza Conde and Richard J. Seymour .................................................... 178

Generation of Second-Order Long Waves at Depth Discontinuity
Hiroaki Toita and Masaru Mizuguchi .............................................................................................. 184

Internal Characteristics of Breaking Waves Over Submerged Breakwaters
Kiyoshi Takikawa, Fumihiko Yamada and Kensaku Matsumoto ................................................ 192

Breaking Waves and Offshore Design
William J. Easson .......................................................................................................................... 200

Analysis of Ocean Waves by Crossing- and Oscillation-Intensities
I. Rychlik and M.R. Leadbetter .......................................................................................................... 206

Long Waves Accompanied by the Reflection of Short-Wave Groups
Wataru Kioka, Satoru Yamane, Kenji Kashihara and Shin-ichi Aoki ............................................ 214

Performance of Active Wave Absorption Systems: Comparison of Wave Gauge and Velocity Meter Based Systems
Tue Hald and Peter Frigaard ............................................................................................................ 221

Simulation of Design Storm Wave Conditions with Tailored Wave Groups
Günther F. Clauss and Walter L. Kühnlein ....................................................................................... 228

Upstream Soliton Generation by a Slender, Vertical Strut and Ship: Boussinesq Equations
R.C. Ertekin, Z.M. Qian and J.V. Wehausen ................................................................................... 238

Three-Dimensional Characteristics of Velocity Field and Effects of Undertow in a Surf Zone
Y. Watanabe and N. Mori ............................................................................................................... 247
Characteristics of Long-Period Waves Observed in a Port
Tetsuya Hiraishi............................................................................................................... 254

Accuracy Estimates of Multidecade Return Period Wind Velocity Values Over Shelf
Vladimir N. Kryjov............................................................................................................. 259

Statistic Comparison Between Wave Height Time Histories from Different Simulation
Techniques for a Campeche Bay Sea State
Jorge Silva-Ballesteros and Federico Barranco-Cicilia ..................................................... 265

A Wave Climate Study for an LNG Terminal Near Marmara Ereglisi, Turkey
Adnan Akyarli and Ahmet C. Yalciner.................................................................................. 272

A Wave/Wind Climatology for the Gulf of Mexico

Effects of a Submerged Dike on the Statistical Properties of a Random Wave Field
Jaw-Guei Lin and John Z. Yim.............................................................................................. 287

Solitons, Positons and Trains of Algebraically Decaying Waves
K.W. Chow and K. Tso............................................................................................................. 292

Effect of Boundary on Ship Waves
Sing-Kwan Lee and Allen T. Chwang.................................................................................... 296

Active Wave Control by a Pitching Porous Plate
T.L. Yip and Allen T. Chwang............................................................................................... 302

A Perturbation-DRBEM Model for Wave Refraction-Diffraction
S.S. Hsiao, J.H. Wu and Y.F. Chiu....................................................................................... 308

Nonlinear Shallow Water Waves Generated by Submerged Moving Slender Bodies: An
Experimental Study
Michelle H. Teng and Theodore Y. Wu.................................................................................. 313

Irregular Broken Wave Forces on Vertical Wall
Yu-cheng Li, Da-zhong Liu, Guo-ping Qi and Shiao-jun Su................................................... 318

Viscous Effects in Wave-Body Interaction
M. Landrini, M. Ranucci, C.M. Casciola and G. Graziani.................................................. 327

Optimum Dynamic Response of a Floating Vessel Restrained by Cables: A Parametric Analysis
A. Carcaterra, M. Landrini and C. Lugni............................................................................... 336

Second-Order Approximate Solution of Nonlinear Wave Diffraction Due to a Cylinder in
Directional Sea
Norimi Mizutani, Takeshi Sanada, Akira Imai, Koichiro Iwata, Masumi Watanabe and Yoon-
Koo Kang............................................................................................................................... 345

A Nonlinear Spectral Model for Directional Random Waves in Decreasing Depths
Laura Rebaudengo Landó, Renata Gentile and Giulio Scarsi................................................. 353
Effects of Spectral Width on the Statistical Properties of Simulated Random Wave Fields
John Z. Yim and Jaw-Guei Lin ................................................................. 362

A Weibull-Stokes Model for the Distribution of Maximum Wave and Crest Heights
Raymond Nerzic and Marc Prevosto .......................................................... 367

The Relation Between Wave Length and Wave Period Distributions in Random Gaussian Waves
Georg Lindgren, Igor Rychlik and Marc Prevosto ........................................ 378

Spectral Modeling of Unidirectional Nonlinear Wave Propagation Over Arbitrary Depths
S. Beji and K. Nadaoka ............................................................................. 385

The Measurement of Acceleration Fields Under Waves by DPIV
T.P. Dewhirst, M.L. Jakobsen and C.A. Greatede ........................................... 390

HYDRODYNAMICS: Forces

A Free-Surface Pressure Distribution Solution for the Radiation and Diffraction Problems of
Large-Diameter Piles
G.P. Miao, Y.X. You and Y.Z. Liu ............................................................... 395

Predictions of Morison Type Forces in Irregular, High Reynolds Number Waves
Geir Moe and Ove Tobias Gudmestad.......................................................... 399

Estimation Method of Viscous Forces Acting on Floating Offshore Structures
Kunihiro Hoshino, Shunji Kato and Wataru Koterayama .................................. 407

Hydrodynamic Forces Acting on a Bottom Mounted Circular Cylinder
Ian A.R. Neill and Jon B. Hinwood............................................................... 415

A Simple Procedure for the Wave Impact Forces for Circular Structure Member in Breaking
Wave Zone
Kyu Nam Cho and Jae Joon Yoon ............................................................... 423

The Force Acting on a Horizontal Cylinder Passing Through the Water Surface
M. Uchida, K. Hu and T. Nishijima ............................................................... 427

Stochastic Analysis of Combined Wave and Current Loading on a Vertical Cylinder from
Large-Scale Laboratory Experiments
G. Najafian, R. Burrows and R.G. Tickell ...................................................... 435

The Influence of Grouping on the Force Characteristics of Pairs of Vertical Surface-
Piercing Cylinders
D. Smith and N. Haritos ........................................................................... 443

Runup on Columns in Large Waves
A.J. Martin, W.J. Easson and T. Bruce ......................................................... 449

Wave Runup Effects on Large Diameter Caissons in Shallow Water
R. Armstrong and N. Haritos ....................................................................... 453
Wave Enhancement Due to Structure Block in Semi-Submersibles
T. Bruce and W.J. Easson .......................................................................................................................... 461

Hydrodynamic Analysis of Floating Bodies on Parallel Computers
B. Padmanabhan and R.C. Ertekin ........................................................................................................... 467

Drag Coefficients for Mooring Line Hydrodynamic Damping
G.J. Lyons, D.T. Brown and H.M. Lin ...................................................................................................... 473

Heave Force on a Slender Submerged Body with Application to Form Optimization of Ocean Structure
A.N. Simos and J.A.P. Aranha .................................................................................................................. 480

HYDRODYNAMICS: Responses

Safety of Life at Sea: Lessons Learned from the Analysis of Casualties Involving Ferries
Giulio Russo Krauss and Antonio Cardo.............................................................................................. 484

Survival Analysis of a Deep-Water Floating Offshore Platform About Its Critical Axis Including Coupling
Ravikiran S. Kota, Jeffrey M. Falzarano and Alexander Vakakis ............................................................ 492

On the Roll Radius of Gyration of Ro-Ro Passenger Ships
A. Papanikolaou, E. Boulougouris and D. Spanos ................................................................................... 499

An Investigation on the Applicability of Simplified Mathematical Models to the Roll-Sloshing Problem
Alberto Francescutto and Giorgio Contento ............................................................................................ 507

Effect of Water Inside a Ship on Its Damage Stability
Roby Kambisseri, Tetsuya Hamano and Yoshiho Ikeda ........................................................................... 515

Characterisation of the Flooding Process of a Damaged Ro-Ro Vessel
D. Vassalos and L. Letizia ........................................................................................................................ 523

Field Experiments and Numerical Prediction on Dynamics of a Light Floating Structure Moored in Deep Ocean
Wataru Koterayama, Hiroo Mizuoka, Naoyuki Takatsu and Tetsuro Ikeyama ........................................... 533

Field Observation of Ship Motions Using Multi Camera Trackers
Katsuhiko Saito and Masayoshi Kubo ...................................................................................................... 541

Observation of Long Period Wave and Ship Motion in Tomakomai-port
Tetsuya Hiraishi, Youichi Atsumi, Atsushi Kunits, Shin-ichiro Sekiguchi and Tsutomu Kawaguchi....... 546

Nonlinear Wave Loads on a Ship Advancing in Waves
Ming-Chung Fang and Cheng-Ming Liao .................................................................................................. 552

Time-Domain Prediction of Ship Motions with Experimental Verification
Dexiang Zhu and Mahmoud Katary........................................................................................................... 559

CONTENTS

PLENARY PRESENTATION

Current Trends in the Safety of Offshore Structures
T. Moan .......................................................................................................................................................... 1

TUBULAR STRUCTURES

M. Morita, Y. Yamada, Y. Makino, S.R. Wilmshurst, Y. Kurobane and M.M.K. Lee........................................ 13

Behaviour of Innovative Tubular KT-Joints Under Variable Repeated Loading
Nick K. Milani and Paul Grundy .................................................................................................................... 21

Failure Assessment Diagram Method for Tubular Joints
Björn Klasén and Stig Wästberg ................................................................................................................... 29

Mechanical Properties of Friction Welded Joints of AZ31 Magnesium Alloy
Kazuyoshi Katoh, Toshikatsu Asahina and Hiroshi Tokisue ........................................................................ 37

The Static Strength of Stiffened and Unstiffened L-Joints Made of Circular Hollow Sections
R. Puthli, F. Mang and D. Karcher ................................................................................................................ 44
Additional Tests of CHS Planar KK-Joints Under Anti-Symmetrical Axial Loads
Y. Makino, S.R. Wilmshurst, Y. Kurobane and A. Yoshida ................................................................. 51

Further Numerical Analyses of KK-Joints Under Anti-Symmetrical Axial Loading
S.R. Wilmshurst, Y. Makino and Y. Kurobane .................................................................................... 58

The Axial Strength of Uniplanar X-Joints Reinforced by T-Shaped Ring-Stiffeners
G.J. van der Vegte, D.H. Leray and Y.S. Choo .................................................................................. 65

The Static Behaviour of Bolted I-Beam to RHS Column Connections with a Composite Floor
L.H. Lu and J. Wardenier .................................................................................................................... 70

Characteristics of Bending Strength and Residual Stress Distribution on High Thermal Cycle of
Ceramic/Metal Joint
Young-Chul Park, Sun-Chul Huh, Hoo-Taek Koo and Kwang-Young Kim ......................................... 78

Multiaxial Fatigue in Offshore Tubular Joints
Andras Abel and Xiao-bo Yu ............................................................................................................ 85

Effects of Joint Flexibility on the Fatigue Design of Welded Tubular Lattice Structures
A. Romeijn, S.A. Karamanos and J. Wardenier ................................................................................ 90

FE Mesh Generation for Circular Tubular Joints with or without Cracks
Junjie Cao, Guojing Yang and Jeffrey A. Packer .................................................................................. 98

Numerical SCF-Analyses of Grouted Tubular T- and X-Joints
G. Partiman, J. Wardenier, A. Romeijn and R.J. van Foeken ............................................................. 106

Large Scale Testing of a Multiplanar Tubular DX-Joint
S.P. Chiew, C.K. Soh and T.C. Fung .................................................................................................. 112

Tubular Joints Reliability and Fracture Analyses for Development of Underwater Inspection of
Offshore Steel Structures
Wan Mahmood Wan Ab. Majid and Mohamad bin Embong .............................................................. 119

A Modified CEBG Assessment Approach to Flawed Tubular Joints
Bo Wang, Yoshiaki Kurobane and Yuji Makino ................................................................................. 125

Damage Criterion and Ultimate Strength for Tubular Joints
Bo Wang, Yoshiaki Kurobane and Yuji Makino ................................................................................. 132

RELIABILITY, RISK AND SAFETY

Sensitivity of TLP Tendon Reliability Estimates to Excitation by Multi-Peaked Random Seas
J.W. van de Lindt and J.M. Niedzwecki .............................................................................................. 139

Fatigue and Overload Reliability of Mooring Systems
Geir Olav Hovde and Torgeir Moan ................................................................................................. 145

Risk Analysis of the Vertical Offshore Breakwater at Gela, Italy
G. Passoni, A. Rigoni and L. Franco .................................................................................................. 153

Corrosion Behavior of Thermal Sprayed Metals on Weld of Galvanized Steel  
Young-Gak Kweon and Jai-Hyun Park ...................................................................................... 614

Prevention of Preferential Corrosion of Welded Joints of Carbon Steel in CO₂ Containing Environment  
Shigeru Endo, Sakae Fujita, Moriyasu Nagae and Mitsumasa Iwata .......................................... 618

An Alternative Approach to Assess the Integrity of Corroded Line Pipe - Part I: Current Status  
B.N. Leis and D.R. Stephens ......................................................................................................... 624

An Alternative Approach to Assess the Integrity of Corroded Line Pipe - Part II: Alternative Criterion  
B.N. Leis and D.R. Stephens ......................................................................................................... 635

COMPOSITE MATERIALS

Transverse Fatigue Crack Growth in a Graphite/Epoxy Composite Subjected to Combined Hydrostatic and Axial Loading  
S.T. Mear, H.G. Wheat and H.L. Marcus .................................................................................... 642

Proposition of Polyhedrally-Stiffened Shells for Undersea Pressure Hulls  
R.H. Knapp and T.T. Le ................................................................................................................ 650
Construction Applications of Fiber Reinforced Polymer Composites: A Survey
T. Kant, V.P.V. Ramana, P.K. Dutta, A. Mukherjee and Y. Desai .............................................................. 657

Study of FEM Simulation of Cyclic Plastic Behavior of Face-Centered Crystal (f.c.c.) Polycrystalline Materials
Yasumitsu Tomita, Kiyoshi Hashimoto, Naoki Osawa and Taira Ozaki ............................................................ 664

A Micromechanical Study of the Freeze-Thaw Behavior of Polymer Composites
Piyush K. Dutta .................................................................................................................................................. 672

MARINE AND UNDERWATER SYSTEMS

Design of Fast Ships for Minimal Motions
Alexander H. Day and Lawrence J. Doctors ........................................................................................................ 677

On Efficient Design of Swath Ships by Using Reliability-Based Optimisation
Yongchang Pu ........................................................................................................................................... 684

Comparison of Structural Analysis Methods for Swath Ship Design
L.H. Seidl, K.F. Cheung and S. Wang ................................................................................................................... 689

An Experimental Study on the Structural Behavior and Vibrational Characteristics of Sandwich Plate with Aluminium Honeycomb Core
C.Y. Son, I.T. Kim and J.S. Paik .................................................................................................................... 697

Numerical Study on 3-Dimensional Power-Augmented Ram Wing in Ground Effect
Seung-Hyun Kwag ...................................................................................................................................... 704

The Dynamic Behaviour of a Fast Sailing Monohull in Waves
F. Louarn, W.G. Price and P. Temarel .............................................................................................................. 712

Prediction of Hydrodynamic Forces on High Speed Vessels
Mikio Takaki and Xin Lin .............................................................................................................................. 721

Prediction of the Effects of Control Surfaces on the Motion of a Catamaran
Woo-Joon Yoo, Jae-Hong Park, Tae-Young Lee and Il-Geun Oh .................................................................... 729

Seakeeping Analysis of a 30-Knot Coastal Passenger Swath Ship
H.H. Chun, M.S. Kim and Y.R. Joo ..................................................................................................................... 736

Development of a New Integrated System of Ship Structure Analysis
O. Niho, K. Nishimura, T. Tsubokawa, H. Kaminaga, T. Maeda and K. Shimada ...................................................... 746

The Influence of a Ship's Rudder on the Scouring Action of a Propeller Wash
G.A. Hamill and J.A. McGarvey .................................................................................................................... 754

A Finite-Volume Method for Three Dimensional Viscous Flow Around Ship Stern
Tieli Li, Yan Lin and Yanying Wang .................................................................................................................. 758

Ship Form Description with Function Parameter
Yan Lin, Zhaohui Zhu, Zhuoshang Ji and Yinsheng Dai ......................................................................................... 761
A CFD Model of a Marine Propeller Wash
P.B. Brewster, G.A. Hamill, S. Raghu...H.T. Johnston ........................................ 763

Navy Total Asset Visibility: A System Component Review
Robert F. Paguio and Ramon Flores ................................................................. 768

Developing and Testing a Rough-Water Flexible Connector System for Pontoon Barges
William G. Hatch, Erick T. Huang and Joseph L. Barthelemy.......................... 773

Rapid Steel Pile Cutting Technology
Sheng S. Lin ....................................................................................................... 780

Design of an Expeditionary Port Facility
Michele A. Murdoch and Glenwood Bretz.......................................................... 784

Buckling Strength of Lightened Aluminium Hull Structures
Yoshiteru Tanaka and Kazuyoshi Matsuoka...................................................... 790

A Study on the Characteristics of BTA Deep Hole Drilling for Marine Part Materials
Sung-Bo Sim and Tae-Ok Jun .............................................................................. 798

ADDITIONAL PAPERS

Recent Developments in Evaluating and Designing Against Offshore Fire and Explosion
G.A. Chamberlain ............................................................................................... 807

Risk Based Decisions for Entrance Channel Operation and Design
Andrew L. Silver and John F. Dalzell.................................................................. 815

ISOPE-97 Proc. Vol. 1-4 97.3.30
